Identity and Symbolic Interaction Richard T. Serpe, Robin Stryker, Brian Powell, 2020-04-22 This book examines identity theory's centrality within social psychology and its foundations within structural symbolic interaction highlighting its links not only to other prominent sociological subfields but also to other theoretical perspectives within and beyond sociology The book provides a synthetic overview outlining the intellectual lineage of identity theory within structural symbolic interactionism and how the Indiana School of identity theory and research associated especially with Sheldon Stryker relates to other symbolic interactionist traditions within sociology It also analyses the latest developments in response to the push to integrate identity theory which initially focused on role identities with the study of personal group and social identities Further it discusses the relationship between identity theory and affect control theory providing a sense of the many substantive topics within sociology beyond social psychology for which the study of identity has important sometimes underappreciated implications The book concludes with a chapter summarizing the interrelated lessons learned while also reflecting on remaining key questions and challenges for the future development of identity theory The Math Teacher's Toolbox Bobson Wong, Larisa Bukalov, 2020-04-09 Math teachers will find the classroom tested lessons and strategies in this book to be accessible and easily implemented in the classroom The Teacher's Toolbox series is an innovative research based resource providing teachers with instructional strategies for students of all levels and abilities Each book in the collection focuses on a specific content area Clear concise guidance enables teachers to quickly integrate low prep high value lessons and strategies in their middle school and high school classrooms Every strategy follows a practical how to format established by the series editors The Math Teacher's Toolbox contains hundreds of student friendly classroom lessons and teaching strategies Clear and concise chapters fully aligned to Common Core math standards cover the underlying research required technology practical classroom use and modification of each high value lesson and strategy This book employs a hands on approach to help educators quickly learn and apply proven methods and techniques in their mathematics courses Topics range from the planning of units lessons tests and homework to conducting formative assessments differentiating instruction motivating students dealing with math anxiety and culturally responsive teaching Easy to read content shows how and why math should be taught as a language and how to make connections across mathematical units Designed to reduce instructor preparation time and increase student engagement and comprehension this book Explains the usefulness application and potential drawbacks of each instructional strategy Provides fresh activities for all classrooms Helps math teachers work with ELLs advanced students and students with learning differences Offers real world guidance for working with parents guardians and co teachers The Math Teacher's Toolbox Hundreds of Practical ideas to Support Your Students is an invaluable source of real world lessons strategies and techniques for general education teachers and math specialists as well as resource specialists special education teachers elementary and secondary educators and teacher educators *Improving*

Primary Mathematics Education, Teaching and Learning Mellony Graven, Hamsa Venkat, 2017-01-19 This book focuses on how to improve the teaching and learning of primary level mathematics education within resource constrained contexts. It builds on two large numeracy projects within South Africa which speak to broader global concerns and highlight how research and development not only enables one to meet ethical imperatives but also explore how further interventions can be developed. Teacher and research communities must work together to create mutually beneficial relationships and establish a cohesive understanding of the requirements of primary mathematics education.

The Nature and Development of Mathematics John Adams, Patrick Barmby, Alex Mesoudi, 2017-04-21 From an infant's first grasp of quantity to Einstein's theory of relativity the human experience of number has intrigued researchers for centuries. Numeracy and mathematics have played fundamental roles in the development of societies and civilisations and yet there is an essential mystery to these concepts evidenced by the fear many people still feel when confronted by apparently simple sums. Including perspectives from anthropology, education and psychology *The Nature and Development of Mathematics* addresses three core questions: Is maths natural? What is the impact of our culture and environment on mathematical thinking? And how can we improve our mathematical ability? Examining the cognitive processes that we use, the origins of these skills and their cultural context and how learning and teaching can be supported in the classroom, the book contextualises each issue within the wider field, arguing that only by taking a cross disciplinary perspective can we fully understand what it means to be numerate as well as how we become numerate in our modern world. This is a unique collection including contributions from a range of renowned international researchers. It will be of interest to students and researchers across cognitive psychology, cultural anthropology and educational research.

Contemporary Perspectives on Research in Motivation in Early Childhood Education Olivia Saracho, 2019-03-01 Researchers from different disciplines e.g. physiological, psychological, philosophical have investigated motivation using multiple approaches. For example in physiology the scientific study of the normal function in living systems such as biology researchers may use electrical and chemical stimulation of the brain, the recording of electrical brain wave activity with the electroencephalograph and lesion techniques where a portion of the brain usually of a laboratory animal is destroyed and subsequent changes in motivation are noted. Petri Cofer 2017 Physiological studies mainly conducted with animals other than humans have revealed the significance of particular brain structures in the control of fundamental motives such as hunger, thirst, sex, aggression and fear. In psychology researchers may study the individuals' behaviors to understand their actions. In sociology researchers may examine how individuals' interactions influence their behavior. For instance in the classroom students and teachers behave in expected ways which may differ when they are outside the classroom. Saracho 2003 examined the students' academic achievement when they matched or mismatched their teachers' way of thinking. She identified both the teachers and students' individual differences and defined consistencies in their cognitive processes. In philosophy researchers can study the individuals' theoretical position such as supporting Maslow's 1943 concept

that motivation can create behaviors that augments motivation in the future Abraham H Maslow s theory of self actualization supports this theoretical position Petri Cofer 2017 These areas and others are represented in this volume This volume is devoted to understanding mutual and contemporary themes in the individuals motivation and its relationship to cognition The current literature covers several methods to the multifaceted relationships between motivational and cognitive processes Comprehensive reviews of the literature focus on prominent cognitive perspectives on motivation with young children which includes ages from birth to eight years of age The chapters in this special volume review and critically analyze the literature on several aspects of the relationships between motivational and cognitive processes and demonstrates the breadth and theoretical effectiveness of this domain This brief introduction acknowledges the valuable contributions of these chapters to the study of human motivation This volume can be a valuable tool to researchers who are conducting studies in the motivation field It focuses on important contemporary issues on motivation in early childhood education ages 0 to 8 to provide the information necessary to make judgments about these issues It also motivates and guides researchers to explore gaps in the motivation literature
