Teaching Gaea Leinhardt,Ralph Putnam,Rosemary A. Hattrup,2020-11-25 This volume emerges from a partnership between the American Federation of Teachers and the Learning Research and Development Center at the University of Pittsburgh The partnership brought together researchers and expert teachers for intensive dialogue sessions focusing on what each community knows about effective mathematical learning and instruction The chapters deal with the research on and conceptual analysis of specific arithmetic topics addition subtraction multiplication division decimals and fractions or with overarching themes that pervade the early curriculum and constitute the links with the more advanced topics of mathematics intuition number sense and estimation Serving as a link between the communities of cognitive researchers and mathematics educators the book capitalizes on the recent research successes of cognitive science and reviews the literature of the math education community as well **The Power of Peers in the Classroom** Karen R. Harris,Lynn Meltzer,2015-06-23 Peer support and social relationships have a tremendous influence on development motivation and achievement for all students including struggling learners and those with disabilities This highly practical book is one of the few resources available to guide classroom teachers and special educators in the application of peer assisted instructional strategies in grades K 12 Expert contributors describe evidence based approaches for building students skills in reading writing math and other content areas as well as social competence and executive functioning Sample lessons and more than a dozen reproducible tools are provided Purchasers get access to a Web page where they can download and print the reproducible materials

Teaching Maths D.M. Neal,2013-10-23 School mathematics is a complex subject and an ever changing topic but this book will help teachers parents and employers to understand it better *Tyranny of the Textbook* Beverlee Jobrack,2011-12-23 Educational reforms and standards have been a topic of public debate for decades with the latest go round being the State Common Core Curriculum Standards But time and again those reforms have failed and each set of standards no matter how new and different has had little impact on improving student achievement Why The textbooks Textbooks sell based on design and superficial features not because they are based on the latest research on how children learn and how well they promote student achievement In *Tyranny of the Textbook* Beverlee Jobrack retired from educational publishing sheds light on why this happens She gives an engaging and fascinating look behind the scenes of how K 12

textbooks are developed written adopted and sold And perhaps most importantly she clearly spells out how the system can change so that reforms and standards have a shot at finally being effective Did you know Reform efforts have focused on writing and rewriting standards and tests but these rarely have any effect on the core curriculum that is published School districts and states don't use effectiveness as a criterion for evaluating and purchasing textbooks Publishers don't offer textbooks with better content or the latest teaching methods because teachers don't want textbooks that require them to change their practices Teachers report that they don't rely on a textbook in their class but research shows that they do Three companies publish 75 percent of the K 12 educational materials Those three companies are producing similar programs with the same instructional strategies none of which require teachers to change their practices significantly Publishers write textbooks for California and Texas All of the other markets have to make do with books only superficially adjusted for their states *Tyranny of the Textbook* , **Eastern European Mathematics Education in the Decades of Change**

Alexander Karp, 2020-05-04 This contributed volume is devoted to the recent history and evolution of mathematics education in Eastern Europe exploring how it was influenced by social and political changes in this part of the world Despite the broad recognition of the importance of these changes little scholarship exists that examines the ways in which they were followed by changes in the teaching of mathematics in the post socialist countries Indeed the analyzed processes are complex and vary across the states Accordingly this book touches on many factors including differences in cultures and traditions that find expression in the teaching of mathematics Specifically this volume seeks to explore what changes there were in education in general and in the position of mathematics in school education in these years and how these changes may be explained and documented what changes there were in the content of mathematics education and its assessment and how were they motivated and adopted what new textbooks appeared and what new methodological ideas were offered in them how and why mathematics teacher education and or professional development changed what was the role if any of foreign influences on mathematics education etc The book will be of interest to both researchers in mathematics education and practitioners teachers as well as a broader audience of historians and educators exploring the political aspects of education Strategies for Building Academic Vocabulary in Mathematics Christine Dugan, 2010-02-01 Boost students mathematics vocabulary with easy to implement effective strategies Sample lessons using each strategy are included for grade spans K 2 3 5 6 8 and 9 12 using vocabulary words from standards based content specific units of study *Mathematics Worksheets Don't Grow Dendrites* Marcia L. Tate, 2008-08-21 Engage students in effective meaningful experiences in mathematics Following the format of Marcia L. Tate's previous bestsellers this user friendly guide offers math teachers 20 powerful brain based teaching strategies that incorporate visual auditory kinesthetic and tactile modalities to promote student engagement and achievement The book focuses on the NCTM focal points and includes a bibliography of math and literature resources and a lesson planning guide The chapters offer A what why and how for each strategy Specific brain compatible mathematics
