Hresko, Shelley R. Herron, 1999 This text is an exciting program for allowing students to explore their problem solving abilities Students curiosity will be ignited as they progress through the self guided and self checking activities in the text To supplement the activities in the book teacher tips and activities are included in the teacher s guide Grades 3 5     *Fast & Fun Mental Math* Chuck Lotta, 2000-05 An experienced math teacher shares the 250 10 minute quizzes he developed that helped boost his students mental math skills and their scores on standardized tests Topics covered include addition subtraction multiplication division numeration patterns percents ratio rounding prime numbers geometry and much more Includes ready to use reproducible answer sheets Geared to the NCTM standards For use with Grades 4 8     *Abstract Mathematical Cognition* Wolfgang Grodd, Philippe Chassy, 2016-08-09 Despite the importance of mathematics in our educational systems little is known about how abstract mathematical thinking emerges Under the uniting thread of mathematical development we hope to connect researchers from various backgrounds to provide an integrated view of abstract mathematical cognition Much progress has been made in the last 20 years on how numeracy is acquired Experimental psychology has brought to light the fact that numerical cognition stems from spatial cognition The findings from neuroimaging and single cell recording experiments converge to show that numerical representations take place in the intraparietal sulcus Further research has demonstrated that supplementary neural networks might be recruited to carry out subtasks for example the retrieval of arithmetic facts is done by the angular gyrus Now that the neural networks in charge of basic mathematical cognition are identified we can move onto the stage where we seek to understand how these basics skills are used to support the acquisition and use of abstract mathematical concepts     Computer Education , 1987
