Grid Divya Asija,R K Viral,Resul Daş,Gürkan Tuna,2024-10-08 Cyber Security Solutions for Protecting and Building the Future Smart Grid guides the reader from the fundamentals of grid security to practical techniques necessary for grid defense Through its triple structure readers can expect pragmatic detailed recommendations on the design of solutions and real world problems The book begins with a supportive grounding in the security needs and challenges of renewable integrated modern grids Next industry professionals provide a wide range of case studies and examples for practical implementation Finally cutting edge researchers and industry practitioners guide readers through regulatory requirements and develop a clear framework for identifying best practices Providing a unique blend of theory and practice this comprehensive resource will help readers safeguard the sustainable grids of the future Provides a fundamental overview of the challenges facing the renewable integrated electric grid Offers a wide range of case studies examples and practical techniques for implementing security in smart and micro grids Includes detailed guidance and discussion of international standards and regulations for industry and implementation

New Challenges and Perspectives in Conservation

Breeding Programs Eliana Pintus, José Luis Ros-Santaella,William Holt,Pierre Comizzoli,2025-05-21 Conservation Breeding Programs CBPs remain essential tools to preserve animal biodiversity and save threatened species from extinction Despite the advances made during the last decades CBPs have been carried out only on a small number of species mostly mammals and birds There is therefore an urgent need to develop and complement in situ and ex situ strategies to also preserve other vertebrates like fish amphibians and reptiles in which the biodiversity loss because of climate change or other anthropogenic activities is even more dramatic One of the main factors that limits CBPs success is the lack of knowledge of the animal reproductive biology and behavior which is precisely known for instance in less than 4% of mammals the majority of which are terrestrial species Such knowledge is beneficial not only to enhance but also to control animal fertility that is especially warranted for the management of overabundant or invasive species which represent a further major threat for biodiversity The goal of this Research Topic is to bring together studies that deal with different aspects of animal reproduction both in captive and wild populations This includes both ex situ and in situ approaches such as the management of animal reproduction in captive populations and their reintroduction release into the wild Other approaches such as assisted reproductive technologies and biobanking greatly contribute to the success of conservation breeding This Research Topic also welcomes studies exploring the effects of biotic e g inbreeding diseases stress and abiotic e g anthropogenic activities housing and veterinary care factors on reproductive biology of all vertebrates classes with a special interest to fish amphibians and reptiles As a comprehensive knowledge of animal reproduction and behavior plays a key role for the development and success of breeding programs descriptive studies on reproductive anatomy and physiology of wild or captive species either endangered or overabundant are welcomed The Research Topic also accepts manuscripts that deal

with ethical aspects of animal welfare in CBPs and population management of invasive or overabundant species
