Element	A substance with the same type of atoms.	Pure gold is an element as it only contains gold atoms.
Compound	A substance with two or more atoms, these can be from different elements, and these are chemically bonded.	Two or more atoms that need a lot of energy to be separated, make up a compound.
Mixture	A substance made of two or more different elements or compounds that can be easily separated.	The salad dressing separated into its oil and water component easily.
Chromatography	A separation technique that pull apart the substances in a mixture due to the different absorption properties between paper and the substance.	The inks used to make water soluble black ink were separated into 3 unexpected colours, using filter paper and water.
Distillation	A separation technique that keeps apart substances from a mixture due to their different boiling points.	The rose oil evaporated before the water contained in the petals, in the distillation process for making perfume.
