

12. In a superconducting magnet, wires of superconducting material are embedded in the thick copper matrix, because while the material is in the superconducting state :  
(a) The leakage current passes through copper part  
(b) Copper part helps in conducting heat away from the super-conductor  
(c) Copper part helps in overcoming the mechanical stress  
(d) Copper acts as an insulating cover for superconductor

Ans. (c)

Copper matrix helps in overcoming the mechanical stress when wire material is in superconducting state. When wire material enters to the normal state due to some accidental quench than copper matrix takes over the job of wire material.

13. The crystal structure of some Ceramic materials may be thought of being composed of electrically charged Cations and Anions, instead of Atoms, and as such :  
(a) The Cations are negatively charged, because they have given up their valence electrons to Anions which are positively charged.  
(b) The Cations are positively charged, because they have given up their valence electrons to Anions which are negatively charged.  
(c) The Cations are positively charged, because they have added one electron to their valence electrons borrowing from Anions which are negatively charged.  
(d) The Cations are negatively charged, as they are non-metallic whereas Anions are positively charged being metallic.

Ans. (b)

Ceramics are generally in organic compounds that consists of cations and anions.

- Cations are usually, metals with positive charge.
- Anions are usually non-metals with negative charge.
