1. Design a Luenberger observer for the following state-space system. Implement the code and simulate the system in Matlab.

$$\begin{aligned}x(k+1) &= \begin{bmatrix} 1.8097 & -0.8187 \\ 1 & 0 \end{bmatrix} x(k) + \begin{bmatrix} 0.5 \\ 0 \end{bmatrix} u(k) \\ y(k) &= [0.1810 \quad -0.1810] x(k) + [0] u(k)\end{aligned}$$

Hint: First, check the observability of the system by computing the observability matrix. Then, select desired observer poles and use pole placement to compute the observer gain matrix L .

2. The dynamic equations of the stirred tank system in state-space form are the following:

$$\begin{aligned}\dot{x}(t) &= \begin{bmatrix} -0.5 & 0 \\ 0 & -1 \end{bmatrix} x(t) + \begin{bmatrix} 1 & 0 & 0 \\ -0.1 & 1 & 1 \end{bmatrix} u(t) \\ y(t) &= \begin{bmatrix} 1 & 0 \\ 0 & 1 \end{bmatrix} x(t) + \begin{bmatrix} 0 & 0 & 0 \\ 0 & 0 & 0 \end{bmatrix} u(t)\end{aligned}$$

Design a Luenberger observer for the system. Implement the code and simulate the system in Matlab.

Hint: Since all states are measured (as indicated by the identity matrix in C), consider modifying the problem by assuming one state is not measured. Then, compute the observability matrix and design the observer accordingly.

3. Calculate the observer gains for the following system when the desired characteristic equation is $(\lambda + 5)(\lambda + 10)$

$$\begin{aligned}\dot{x}(t) &= \begin{bmatrix} -1 & 1 \\ 2 & -4 \end{bmatrix} x(t) + \begin{bmatrix} 1 \\ 0 \end{bmatrix} u(t) \\ y(t) &= [1 \quad 0] x(t)\end{aligned}$$

Hint: Verify observability by constructing the observability matrix. Then, set up the characteristic equation of $(A - LC)$ and equate it to the desired characteristic equation to solve for the observer gains

$$L = \begin{bmatrix} l_1 \\ l_2 \end{bmatrix}.$$

Solution

Observability

$$\begin{aligned}CA &= [1 \quad 0] \begin{bmatrix} -1 & 1 \\ 2 & -4 \end{bmatrix} = [-1 \quad 1] \\ O &= \begin{bmatrix} C \\ CA \end{bmatrix} = \begin{bmatrix} 1 & 0 \\ -1 & 1 \end{bmatrix} \text{rank}(O) = 2 = N_o\end{aligned}$$

Characteristic equation

$$\begin{aligned}A - LC &= \begin{bmatrix} -1 & 1 \\ 2 & -4 \end{bmatrix} - \begin{bmatrix} l_1 \\ l_2 \end{bmatrix} [1 \quad 0] = \begin{bmatrix} -1-l_1 & 1 \\ 2-l_2 & -4 \end{bmatrix} \\ |\lambda I - (A - LC)| &= \begin{vmatrix} \lambda + 1 + l_1 & -1 \\ -2 + l_2 & \lambda + 4 \end{vmatrix} \\ (\lambda + 1 + l_1)(\lambda + 4) - (-1)(-2 + l_2) &= \lambda^2 + (5 + l_1)\lambda + 4(1 + l_1) + l_2 - 2\end{aligned}$$

Smooth Nonlinear Optimization in Rn Tamás Rapcsák, 2013-12-01 Experience gained during a ten year long involvement in modelling programming and application in nonlinear optimization helped me to arrive at the conclusion that in the interest of having successful applications and efficient software production knowing the structure of the problem to be solved is indispensable This is the reason why I have chosen the field in question as the sphere of my research Since in applications mainly from among the nonconvex optimization models the differentiable ones proved to be the most efficient in modelling especially in solving them with computers I started to deal with the structure of smooth optimization problems The book which is a result of more than a decade of research can be equally useful for researchers and students showing interest in the domain since the elementary notions necessary for understanding the book constitute a part of the university curriculum I intended dealing with the key questions of optimization theory which endeavour obviously cannot bear all the marks of completeness What I consider the most crucial point is the uniform differential geometric treatment of various questions which provides the reader with opportunities for learning the structure in the wide range within optimization problems I am grateful to my family for affording me tranquil productive circumstances I express my gratitude to F

State Estimation and Stabilization of Nonlinear Systems Abdellatif Ben Makhlouf, Mohamed Ali Hammami, Omar Naifar, 2023-11-06 This book presents the separation principle which is also known as the principle of separation of estimation and control and states that under certain assumptions the problem of designing an optimal feedback controller for a stochastic system can be solved by designing an optimal observer for the system s state which feeds into an

optimal deterministic controller for the system Thus the problem may be divided into two halves which simplifies its design In the context of deterministic linear systems the first instance of this principle is that if a stable observer and stable state feedback are built for a linear time invariant system LTI system hereafter then the combined observer and feedback are stable The separation principle does not true for nonlinear systems in general Another instance of the separation principle occurs in the context of linear stochastic systems namely that an optimum state feedback controller intended to minimize a quadratic cost is optimal for the stochastic control problem with output measurements The ideal solution consists of a Kalman filter and a linear quadratic regulator when both process and observation noise are Gaussian The term for this is linear quadratic Gaussian control More generally given acceptable conditions and when the noise is a martingale with potential leaps a separation principle also known as the separation principle in stochastic control applies when the noise is a martingale with possible jumps

Atherton,2014-06-28 Recent results in the development and application of analysis and design techniques for the control of multivariable systems are discussed in this volume Risk-sensitive Investment Management Mark H A Davis,Sebastien Lleo,2014-07-21 Over the last two decades risk sensitive control has evolved into an innovative and successful framework for solving dynamically a wide range of practical investment management problems This book shows how to use risk sensitive investment management to manage portfolios against an investment benchmark with constraints and with assets and liabilities It also addresses model implementation issues in parameter estimation and numerical methods Most importantly it shows how to integrate jump diffusion processes which are crucial to model market crashes With its emphasis on the interconnection between mathematical techniques and real world problems this book will be of interest to both academic researchers and money managers Risk sensitive investment management links stochastic control and portfolio management Because of its distinct emphasis on integrating advanced theoretical concepts into practical dynamic investment management tools this book stands out from the existing literature in fundamental ways It goes beyond mainstream research in portfolio management in a traditional static setting The theoretical developments build on contemporary research in stochastic control theory but are informed throughout by the need to construct an effective and practical framework for dynamic portfolio management This book fills a gap in the literature by connecting mathematical techniques with the real world of investment management Readers seeking to solve key problems such as benchmarked asset management or asset and liability management will certainly find it useful
