Advances in Artificial Intelligence Martin C. Golumbic, 2012-12-06 Research in artificial intelligence natural language processing and knowledge based systems has blossomed during the past decade At national and international symposia as well as in research centers and universities all over the world these subjects have been the focus of intense debate and study This is equally true in Israel which has hosted several international forums on these topics The articles in this book represent a selection of contributions presented at recent AI conferences held in Israel A theoretical model for a system that learns from its own experience in playing board games is presented in Learning from Experience in Board Games by Ze'ev Ben Porat and Martin Golumbic The model enables such a system to enhance and improve its playing capabilities through the use of a learning mechanism which extracts knowledge from actual playing experience The learning process requires no external guidance or assistance This model was implemented and tested on a variant of Chinese Checkers The paper shows the feasibility and validity of the proposed model and investigates the parameters that affect its performance traits The experimental results give evidence of the validity of the model as a powerful learning mechanism Original and general algorithms for knowledge extraction and pattern matching were designed and tested as part of the prototype computer system Analysis of the performance characteristics of these algorithms indicates that they can handle large knowledge bases in an efficient manner A Formalization of Set Theory without Variables Alfred Tarski, Steven R. Givant, 1987 Culminates nearly half a century of the late Alfred Tarski's foundational studies in logic mathematics and the philosophy of science This work shows that set theory and number theory can be developed within the framework of a new different and simple equational formalism closely related to the formalism of the theory of relation algebras **Principles of physiology, general and comparative** William Benjamin Carpenter, 1851 Principles of Turbulence Control Baochun Fan, Gang Dong, 2022-05-17 This book introduces the mathematical techniques for turbulence control in a form suitable for inclusion in an engineering degree program at both undergraduate and postgraduate levels whilst also making it useful to researchers and industrial users of the concepts It uses a mix of theory computation and experimental results to present and illustrate the methodologies It is based on the three part structure wall turbulence open loop control and feedback control with emphasis on optimal control methodologies The book also includes an introduction of basic principles and fundamentals followed by a chapter on the structure of wall turbulence with emphasis on coherent structures Elsewhere there is focus on control methods of wall turbulence by manipulating the boundaries through their motion and by applying control forces throughout the flow volume The last two chapters will describe the linear and non linear optimal controls This integrated approach will help not only researchers interested in the topic but also graduate or advanced undergraduate students in their course work

Non-Ideal Compressible Fluid Dynamics for Propulsion and Power Francesca di Mare, Andrea Spinelli, Matteo Pini, 2020-07-08 This book reports on advanced theories and methods aimed at characterizing the dynamics of non ideal compressible fluids A special emphasis is given to research fostering the use of non ideal compressible fluids for propulsion and power engineering Both numerical and experimental studies as well as simulations are described in the book which is based on selected contributions and keynote lectures presented at the 2nd International Seminar on Non Ideal Compressible Fluid Dynamics for Propulsion Power Held on October 4 5 in Bochum Germany the seminar aimed at fostering collaborations between academics and professionals The two perspectives have been gathered together in this book which offers a timely guide to advanced fundamentals innovative methods and current applications of non ideal compressible fluids to developing turbomachines and for propulsion and power generation

Advances in Engineering Research and Application Kai-Uwe Sattler, Duy Cuong Nguyen, Ngoc Pi Vu, Banh Tien Long, Horst Puta, 2019-11-30 This proceedings volume gathers the outcomes of the International Conference on Engineering Research and Applications ICERA 2019 which was held at Thai Nguyen University of Technology Vietnam on December 1 2 2019 and provided an international forum for disseminating the latest theories and practices in engineering research and applications The conference focused on original research work in a broad range of areas including Mechanical Engineering Materials and Mechanics of Materials Mechatronics and Micromechatronics Automotive Engineering Electrical and Electronics Engineering and Information and Communication Technology By sharing the latest advances in these fields the book will help academics and professionals alike to revisit their thinking on sustainable development

Advances in Nuclear Fuel Chemistry Markus H.A. Piro, 2020-03-20 *Advances in Nuclear Fuel Chemistry* presents a high level description of nuclear fuel chemistry based on the most recent research and advances Dr Markus H A Piro and his team of global expert contributors cover all aspects of both the conventional uranium based nuclear fuel cycle and non conventional fuel cycles including mining refining fabrication and long term storage as well as emerging nuclear technologies such as accident tolerant fuels and molten salt materials Aimed at graduate students researchers academics and practicing engineers and regulators this book will provide the reader with a single reference from which to learn the fundamentals of classical thermodynamics and radiochemistry Consolidates the latest research on nuclear fuel chemistry into one comprehensive reference covering all aspects of traditional and non traditional nuclear fuel cycles Includes contributions from world renowned experts from many countries representing government industry and academia Covers a variety of fuel designs including conventional uranium dioxide mixed oxides research reactor fuels and molten salt fuels Written by experts with hands on experience in the development of such designs

Single-Sided NMR Federico Casanova, Juan Perlo, Bernhard Blümich, 2011-01-28 This book describes the design of the first functioning single sided tomograph the related measurement methods and a number of applications in

medicine materials science and chemical engineering It will be the first comprehensive account of this new device and its applications Among the key advances of this method is that images can be obtained in much shorter times than originally anticipated and that even vector maps of flow fields can be measured although the magnetic fields are highly inhomogeneous Furthermore the equipment is small mobile and affordable to small and medium enterprises and can be located in doctors offices

The Optical Communications Reference Casimer DeCusatis,Ivan Kaminow,2009-11-10 Extracting key information from Academic Press s range of prestigious titles in optical communications this reference gives the R D optical fiber communications engineer a quick and easy to grasp understanding of the current state of the art in optical communications technology together with some of the underlying theory covering a broad of topics optical waveguides optical fibers optical transmitters and receivers fiber optic data communication optical networks and optical theory With this reference the engineer will be up to speed on the latest developments in no time Provides an overview of current state of the art in optical communications technology enabling the reader to get up to speed with the latest technological developments and establish their value for product development Brings together material from a number of authoritative sources giving both breadth and depth of content and providing a single source of key knowledge and information which saves time in seeking information from scattered sources Explores latest technologies and their implementation allowing the engineer to compare and contrast approaches and solutions Provides just enough introductory material for readers to grasp the underpinning physics giving the engineer an accessible introduction to the underlying theory for a proper understanding

Lithium-Sulfur Batteries Ram K. Gupta,Tuan Anh Nguyen,Huaihe Song,Ghulam Yasin,2022-04-30 Lithium Sulfur Batteries Materials Challenges and Applications presents the advantages of lithium sulfur batteries such as high theoretical capacity low cost and stability while also addressing some of the existing challenges Some of the challenges are low electrical conductivity the possible reaction of sulfur with lithium to form a soluble lithium salt the formation of the dendrimer large volume variation of cathode materials during the electrochemical reaction and shuttle behavior of highly soluble intermediate polysulfides in the electrolyte This book provides some possible solutions to these issues through novel architecture using composite materials doping to improve low conductivity etc as well as emphasizing novel materials architectural concepts and methods to improve the performance of lithium sulfur batteries Covers the state of the art progress on materials technology and

Anjum,Sarvajeet Singh Gill,Om Parkash Dhankher,Juan F. Jimenez,Narendra Tuteja,2018-11-16 This Frontiers Research Topic The Brassicaceae Agri Horticultural and Environmental Perspectives is an effort to provide a common platform to agronomists horticulturists plant breeders plant geneticists molecular biologists plant physiologists and environmental plant scientists exploring major insights into the role of important members of the plant family Brassicaceae the mustard family or Cruciferae in agri horticultural and environmental arenas **Metaphor Studies: Theories, Methods, Approaches, and Future Perspectives** Ilaria Rizzato, Valentina Cuccio,Aletta Gesina Dorst,2024-12-12 Metaphor has been studied as a linguistic conceptual and communicative phenomenon in a wide range of disciplines including linguistics literary studies philosophy education political science media studies communication science psychology and neurosciences While the Cognitive Theory of Metaphor has dominated the field since the cognitive turn in the 1980s alternatives have been proposed including the Neural Theory of Metaphor the Relevance Theory Approach the Complex Systems Approach and the Dynamic Systems Approach Though studies are still often text based there is a growing body of research on visual metaphor multimodal metaphor and gestural metaphor as well as experimental research ranging from studies on metaphor processing and comprehension to studies in NLP and machine learning Metaphor Studies is thus a highly interdisciplinary field that encompasses a myriad of theories approaches and methods In current metaphor research each of these strands is facing new challenges and offering new venues of cutting edge research using state of the art technologies Researchers tend to focus on their own research areas and provide in depth views within the scope of their own disciplines Metaphor Studies do not seem to escape this phenomenon in spite of the large number of disciplines they draw on ranging from linguistics to psychology to the theory of science Hence there seem to be little cooperation and communication across different fields methods and approaches having metaphors and figurative language as their main object of investigation This Research Topic aims to promote cross fertilization among the many research areas involved in Metaphor Studies thus bringing together different methods and perspectives and offering a comprehensive overview of the possible research scenarios **Casp.
