Model-Based Control of Flying Robots for Robust Interaction Under Wind Influence Teodor Tomić, 2022-10-07 This book addresses the topic of autonomous flying robots physically interacting with the environment under the influence of wind. It aims to make aerial robots aware of the disturbance interaction and faults acting on them. This requires reasoning about the external wrench force and torque acting on the robot and distinguishing between wind interactions and collisions. The book takes a model based approach and covers a systematic approach to parameter identification for flying robots. The book aims to provide a wind speed estimate independent of the external wrench including estimating the wind speed using motor power measurements. Aerodynamics modeling is approached in a data driven fashion using ground truth measurements from a 4D wind tunnel. Finally the book bridges the gap between trajectory tracking and interaction control to allow physical interaction under wind influence. Theoretical results are accompanied by extensive simulation and experimental results. **Nonlinear**

Control of Vehicles and Robots Béla Lantos, Lőrinc Márton, 2010-12-01 Nonlinear Control of Vehicles and Robots develops a unified approach to the dynamic modeling of robots in terrestrial aerial and marine environments. The main classes of nonlinear systems and stability methods are summarized and basic nonlinear control methods useful in manipulator and vehicle control are presented. Formation control of ground robots and ships is discussed. The book also deals with the modeling and control of robotic systems in the presence of non smooth nonlinearities. Robust adaptive tracking control of robotic systems with unknown payload and friction in the presence of uncertainties is treated. Theoretical and practical aspects of the control algorithms under discussion are detailed. Examples are included throughout the book allowing the reader to apply the control and modeling techniques in their own research and development work. Some of these examples demonstrate state estimation based on the use of advanced sensors as part of the control system. Model-Based Tracking

Control of Nonlinear Systems Elzbieta Jarzebowska, 2016-04-19 Model Based Control of Nonlinear Systems presents model based control techniques for nonlinear constrained systems. It covers constructive control design methods with an emphasis on modeling constrained systems generating dynamic control models and designing tracking control algorithms for the models. The book's interdisciplinary approach illustrates Active Robot Vision: Camera Heads, Model Based Navigation And
