

Genetics Practice Problems: Pedigree Tables

Remember the following when working pedigree tables:

- [I] Circles are females and squares are males.
- [II] A shaded circle or square indicates that a person has the trait.

The pedigree chart below is the inheritance of color blindness. Shaded individuals are colorblind. First, determine the probable genotype of person I-1. Then answer the questions below the table.

What do you know about the genotype of the mother of II?

These people (I-1 and II-2) had a color blind son (II-2). His dad is normal, his color blind mom, from his mother. Since the mother is not shaded, she must be a carrier.

Number II-3 is colorblind just like his father. Where could he get his allele for colorblindness?

Yes, he must have got his allele for colorblindness from his mother. Must have been that II-1 is a carrier. From her father.

Number numbers II-5 and II-6 were colorblind. How did they have a colorblind son (II-7)?

That mother must be a carrier for color blindness.

What must be the genotype of the parents of a colorblind daughter? Explain.

To have a color blind daughter, she must have the recessive allele from each parent. Her father must be X^bY and mother must have X^bX^b or X^bX .

If mother II-1 has a normal son, what is the probability that their son will be colorblind?

$X^bX \times XY \rightarrow$ all of their sons will be color blind.

(50%) (normal male)
