

Report Writing

By Doug Knight

Why is an engineer in an English class?

Engineers must communicate - everyone must communicate somehow - writing is still the main method of communicating when you can't talk face to face

In my case, I have written reports on one subject and another all my career, and for six years I have been a technical writer

A technical writer translates the engineer's notes, drawings, etc into manuals that tell people how to use and fix things - writes many other things also

What kinds of writers are there? KEEP SHORT

Fiction - story tellers

Non-fiction - write about real things, or situations - just about any topic where the subject is real

Journalist

Historian

General non-fiction (cookbooks, how to books, investigations)

Technical (instruction manuals, reports, specifications)

Business (memos, reports, usually on an organisational - get things done - theme)

Advertising (everything in the best light)

Who is a writer writing for?

The reader

The reader is the most important person in the writing process

The writer must do the thinking for the reader - must answer all the questions that the reader will have - and answer them at the right time - the reader cannot stick up their hand

ALWAYS THINK OF THE READER

Parsons, 2002-11 As the conversion of legacy systems continues the ability to understand embedded business rules becomes more and more critical This ability is directly related to the structure of the programs within those systems We also see the need to teach structured programming to a new generation of programmers who must maintain the billions of lines of existing COBOL code The ultimate purpose of this text is to discuss how to judge the level of structure of a program We do this by defining structured programming and then discussing how a structured program can be built through the application of the concepts of coupling and cohesion We also show how embedded business rules of the program can be separated from the data and presentation functions The reader will be able to use these skills to judge and to improve the structure of a new program or an existing program **Technical Report**, 1952 Type-Logical Syntax Yusuke Kubota, Robert D. Levine, 2020-09-15 A novel logic based framework for representing the syntax semantics interface of natural language applicable to a range of phenomena In this book Yusuke Kubota and Robert Levine propose a type logical version of categorial grammar as a viable alternative model of natural language syntax and semantics They show that this novel logic based framework is applicable to a range of phenomena especially in the domains of coordination and ellipsis that have proven problematic for traditional approaches The type logical syntax the authors propose takes derivations of natural language sentences to be proofs in a particular kind of logic governing the way words and phrases are combined This logic builds on and unifies two deductive systems from the tradition of categorial grammar the resulting system Hybrid Type Logical Categorial Grammar Hybrid TLCG enables comprehensive approaches to coordination gapping dependent cluster coordination and right node raising and ellipsis VP ellipsis pseudogapping and extraction ellipsis interaction It captures a number of intricate patterns of interaction between scopal operators and seemingly incomplete constituents that are frequently found in these two empirical domains Kubota and Levine show that the hybrid calculus underlying their framework incorporates key analytic ideas from competing approaches in the generative syntax literature to offer a unified and systematic treatment of data that have posed considerable difficulties for previous accounts Their account demonstrates that logic is a powerful tool for analyzing the deeper principles underlying the syntax and semantics of natural language
