In this hands-on guide, Felix Zumstein, creator of *xlwings*, a popular open source package for automating Excel with Python, shows experienced Excel users how to integrate these two worlds efficiently. Excel has added quite a few new capabilities over the past couple of years, but its automation language, VBA, stopped evolving a long time ago. Many Excel power users have already adopted Python for daily automation tasks. This guide gets you started. Use Python without extensive programming knowledge. Get started with modern tools including Jupyter notebooks and Visual Studio Code. Use pandas to acquire, clean, and analyze data and replace typical Excel calculations. Automate tedious tasks like consolidation of Excel workbooks and production of Excel reports. Use *xlwings* to build interactive Excel tools that use Python as a calculation engine. Connect Excel to databases and CSV files and fetch data from the internet using Python code. Use Python as a single tool to replace VBA, Power Query, and Power Pivot.
