Crisis of 2037 James LePage Ph.D. CPA,2015-12-12 The hope for this book is that it will help the millions of Americans counting on the Social Security System for financial support now and in the future understand why benefits paid by the System could either end or be significantly reduced after 2037 Trustees of the System say a 25 percent cut in benefits or an increase in taxes will be required by 2037 in order for the System to continue to operate For the millions of Americans who currently depend on Social Security and the millions of young Americans who will depend on the System after 2037 a 25 percent cut in benefits could force millions into poverty This book presents scientific evidence that the main cause of this crisis is the loss of millions of potential contributors to the System critical for the Systems ability to pay benefits because of a significant shift in the attitude toward and treatment of unborn children over the past 40 years The book also explains how the root cause of the problem perhaps is a misunderstanding of how morality actually works when it comes to dealing with issues of life Regardless of how one feels about the life of the unborn the fact is the loss of generations of potential contributors to the Social Security System is destroying the System millions of Americans depend on and will depend on to finance the basic needs of life After 2037 a 1 000 monthly benefit will drop to 750 or a worker who now pays 300 per month to Social Security will pay 500 per month As there are limits to benefit cuts and tax increases if the illogical moral thinking and the destruction of human lives continue at current rates the System eventually will be destroyed altogether and illogical moral thinking most likely would be the reason why *The Complete Idiot's Guide to Getting Published, 5E* Jennifer Basye

Analysis: Summarization, Correlation, and Visualization Boris Mirkin, 2019-04-15 This text examines the goals of data analysis with respect to enhancing knowledge and identifies data summarization and correlation analysis as the core issues. Data summarization, both quantitative and categorical, is treated within the encoder-decoder paradigm, bringing forward a number of mathematically supported insights into the methods and relations between them. Two chapters describe methods for categorical summarization: partitioning/divisive clustering and separate cluster finding, and another explains the methods for quantitative summarization: Principal Component Analysis and PageRank Features. An in-depth presentation of K-means partitioning, including a corresponding Pythagorean decomposition of the data scatter, is provided. Advice regarding such issues as clustering of categorical and mixed-scale data, similarity, and network data interpretation, as well as anomalous clusters, the number of clusters, etc., is given. Thorough attention to data-driven modelling, including a number of mathematically stated relations between statistical and geometrical concepts, including those between goodness-of-fit criteria for decision trees and data standardization, similarity, and consensus clustering, modularity clustering, and uniform partitioning, is included. New edition highlights: Inclusion of ranking issues such as Google PageRank, linear stratification, and tied rankings; median consensus clustering; semi-average clustering; one-cluster clustering. Restructured to make the logics more straightforward and sections self-contained. Core Data Analysis: Summarization, Correlation, and Visualization is aimed at those who are eager to participate in developing the field as well as appealing to novices and practitioners.
