Affective Computing and Intelligent Interaction Jianhua Tao,Tieniu Tan,Rosalind W. Picard,2005-11-15 This volume contains the proceedings of the 1st International Conference on Affective Computing and Intelligent Interaction ACII 2005 held in Beijing China on 22-24 October 2005. Traditionally the machine end of human machine interaction has been very passive and certainly has had no means of recognizing or expressing affective information. But without the ability to process such information computers cannot be expected to communicate with humans in a natural way. The ability to recognize and express affect is one of the most important features of man beings. We therefore expect that computers will eventually have to have the ability to process affect and to interact with human users in ways that are similar to those in which humans interact with each other. Affective computing and intelligent interaction is a key emerging technology that focuses on myriad aspects of the recognition, understanding and expression of affective and emotional states by computers. The topic is currently a highly active research area and is receiving increasing attention. This strong interest is driven by a wide spectrum of promising applications such as virtual reality, network games, smart surveillance, perceptual interfaces, etc. Affective computing and intelligent interaction is a multidisciplinary topic involving psychology, cognitive science, physiology and computer science. ACII 2005 provided a forum for scientists and engineers to exchange their technical results and experiences in this fast moving and exciting field. A total of 45 oral papers and 82 poster papers included in this volume were selected from 205 contributions submitted by researchers worldwide.

Cognitive Approaches to Specialist Languages Marcin Grygiel,2017-05-11 Specialist languages such as the languages of law, business, aviation, football and politics can be perceived as highly conventionalized, semi-natural and not fully autonomous communication codes limited to specific and predominantly formal situations. A large number of them can be best characterized by subject matter and semantic content but the most important distinctive element in their make up is the frame of context in which they are embedded. This volume discusses various ways of approaching the problems associated with the very broad phenomenon of specialist languages by means of the analytical mechanisms and theoretical conceptions developed within the framework of Cognitive Linguistics. The volume includes research carried out by world renowned experts in the field.
