A.F. Kalverboer, A. Gramsbergen, 2013-11-11 The electric utility industry and its stakeholders in the United States appear to be at a critical juncture in time Powerful forces of global proportions are propelling the industry instinctively and in a secular fashion towards restructuring That the industry will change is a fait accompli The nature and timing of the change is still a matter of intense debate however Because of the evolution of the industry into its present day form i e regulated local monopolies in their designated franchise service territories the relative roles and expectations of various institutions would have to change to conform to the new state in the future In either encouraging or allowing this change to happen society is essentially saying that future societal welfare would be better served by the changed structure contemplated What that assumption translates into in more direct terms is that creation of future wealth would be better accomplished through redistribution of wealth today Thoughtful individuals recognize the enormous responsibility placed upon the various entities empowered with jurisdiction over the timing and nature of the structural change They are trying hard to bring analytical rigor to bear on the debate One very critical element of this debate on restructuring is the issue of the treatment of transmission The issue has been variously labeled transmission access or pricing Volumes have been written and spoken on this topic **The Electric Power Engineering Handbook - Five Volume Set** Leonard L.

Congress. Senate. Committee on Armed Services, 1974 **Power Systems Restructuring** Marija Ilic, Francisco Galiana, Lester Fink, 2013-03-14 The writing of this book was largely motivated by the ongoing unprecedented world wide restructuring of the power industry This move away from the traditional monopolies and toward greater competition in the form of increased numbers of independent power producers and an unbundling of the main services that were until now provided by the utilities has been building up for over a decade This change was driven by the large disparities in electricity tariffs across regions by technological developments that make it possible for small producers to compete with large ones and by a widely held belief that competition will be beneficial in a broad sense All of this together with the political will to push through the necessary legislative reforms has created a climate conducive to restructuring in the electric power industry Consequently since the beginning of this decade dramatic changes have taken place in an ever increasing list of nations from the pioneering moves in the United Kingdom Chile and Scandinavia to today's highly fluid power industry throughout North and South America as well as in the European Community The drive to restructure and take advantage of the potential economic benefits has in our view forced the industry to take actions and make choices at a hurried pace without the usual deliberation and thorough analysis of possible implications We must admit that to speak of the industry at this juncture is perhaps disingenuous even misleading **The**
