Edgar Allan Poe Brett Zimmerman, 2005 Critics have often charged Edgar Allan Poe with sloppy writing Using stylistics and classical rhetorical theory Brett Zimmerman demonstrates that Poe was in fact a brilliant and deliberate lexical technician who varied his prose style according to genre and the world views and the mental health or illness of his narrators Zimmerman breaks new ground in Poe studies by providing a catalogue of three hundred figures of speech and thought in the author's oeuvre including his tales personal correspondence literary criticism book reviews and Marginalia This incisive catalogue of literary and rhetorical terms presented in alphabetical order and amply illustrated with examples in addition to close examinations of some of Poe's most important tales overwhelmingly demonstrates Poe's rhetorical and linguistic dexterity putting a nearly two hundred year old critical debate to rest by showing Poe to be a conscientious craftsman of the highest order

Children's Right to Freedom, Care and Enlightenment Bertram Bandman, 2013-10-28 Professor Bandman presents a philosophical argument in answer to the question How do we justifiably bring up our children Bandman suggests that the status of children's rights in collusion with the method by which children are raised result in the strength and breadth of our rights as adults This is an eminently worthwhile study involving the interests of younger and older people alike engaging us all in reflective examination of issues right at our doorsteps

Ad Hominem Arguments Douglas Walton, 1998 A vital contribution to legal theory and media and civic discourse In the 1860s northern newspapers attacked Abraham Lincoln's policies by attacking his character using the terms drunk baboon too slow foolish and dishonest Steadily on the increase in political argumentation since then the argumentum ad hominem or personal attack argument has

now been carefully refined as an instrument of oppo tactics and going negative by the public relations experts who craft political campaigns at the national level In this definitive treatment of one of the most important concepts in argumentation theory and informal logic Douglas Walton presents a normative framework for identifying and evaluating ad hominem or personal attack arguments Personal attack arguments have often proved to be so effective in election campaigns for example that even while condemning them politicians have not stopped using them In the media in the courtroom and in everyday confrontation ad hominem arguments are easy to put forward as accusations are difficult to refute and often have an extremely powerful effect on persuading an audience Walton gives a clear method for analyzing and evaluating cases of ad hominem arguments found in everyday argumentation His analysis classifies the ad hominem argument into five clearly defined subtypes abusive direct circumstantial bias poisoning the well and tu quoque you re just as bad arguments and gives methods for evaluating each type Each subtype is given a well defined form as a recognizable type of argument The numerous case studies show in concrete terms many practical aspects of how to use textual evidence to identify and analyze fallacies and to evaluate argumentation as fallacious or not in particular cases

Verbal Communication Andrea Rocci, Louis de Saussure, 2016-03-07 Common sense tells us that verbal communication should be a central concern both for the study of communication and for the study of language Language is the most pervasive means of communication in human societies especially if we consider the huge gamut of communication phenomena where spoken and written language combines with other modalities such as gestures or pictures Most communication researchers have to deal with issues of language use in their work Classic methods in communication research from content analysis to interviews and questionnaires not to mention the obvious cases of rhetorical analysis and discourse analysis presuppose the understanding of the meaning of spontaneous or elicited verbal productions Despite its pervasiveness verbal communication does not currently define one cohesive and distinct subfield within the communication discipline The Handbook of Verbal Communication seeks to address this gap In doing so it draws not only on the communication discipline but also on the rich interdisciplinary research on language and communication that developed over the last fifty years as linguistics interacted with the social sciences and the cognitive sciences The interaction of linguistic research with the social sciences has produced a plethora of approaches to the study of meanings in social context from conversation analysis to critical discourse analysis while cognitive research on verbal communication carried out in cognitive pragmatics as well as in cognitive linguistics has offered insights into the interaction between language inference and persuasion and into cognitive processes such as framing or metaphorical mapping The Handbook of Verbal Communication volume takes into account these two traditions selecting those issues and themes that are most relevant for communication scholars It addresses background matters such as the evolution of human verbal communication and the relationship between verbal and non verbal means of communication and offers a an extensive discussion of the explicit and implicit meanings of verbal messages with a focus on

emotive and figurative meanings Conversation and fundamental types of discourse such as argument and narrative are presented in depth as is the key notion of discourse genre The nature of writing systems as well as the interaction of spoken or written language with non verbal modalities are devoted ample attention Different contexts of language use are considered from the mass media and the new media to the organizational contexts Cultural and linguistic diversity is addressed with a focus on phenomena such as multilingual communication and translation A key feature of the volume is the coverage of verbal communication quality Quality is examined both from a cognitive and from a social perspective It covers topics that range from to the cognitive processes underlying deceptive communication to the methods that can be used to assess the quality of texts in an organizational context **Contemporary Issues in Bioethics** Peter A. Clark, 2012-03-07

The main strength of this book is the international exchange of ideas that will not only highlight many of these crucial bioethical issues but will strengthen the discipline of bioethics both nationally and globally A critical exchange of ideas allows everyone to learn and benefit from the insights gained through others experiences Analyzing and understanding real medical ethical issues and cases and how they are resolved is the basis of education in bioethics for those who will have to make these decisions in the future The more we examine analyze and debate these bioethical issues and cases the more knowledge will be gained and hopefully we will all gain more practical wisdom
