Robotics Chao Chen, Wesley Au, Shao Liu, 2025-06-30 Robotics From Theory to Practice introduces robotic theories and technologies to audiences including university students professionals with engineering backgrounds and even high school students interested in building their own robots We aim to bridge the gap between classic theories and real world applications of robotic manipulators which to date have far exceeded the domain of conventional industry The contents are divided into three parts The first two cover classic theories of robotics including kinematics dynamics path planning control and programming Specifically Part I is an introduction targeting junior students featuring more simplistic topics and examples Part II provides the senior students and professionals with more in depth discussions on critical topics and more comprehensive examples In Part III we demonstrate how classic robotics theory can be extended to more advanced theoretical frameworks and adopted in real world applications beyond conventional industries This textbook is valuable to broad readers including those who have limited background in general engineering and wish to explore non conventional applications of robotic manipulators The scaffolded contents from Part I to Part III are created to lower the prerequisites and smooth the learning curve

Interfacing Humans and Robots for Gait Assistance and Rehabilitation Carlos A. Cifuentes, Marcela Múnera, 2021-09-16 The concepts represented in this textbook are explored for the first time in assistive and rehabilitation robotics which is the combination of physical cognitive and social human robot interaction to empower gait rehabilitation and assist human mobility The aim is to consolidate the methodologies modules and technologies implemented in lower limb exoskeletons smart walkers and social robots when human gait assistance and rehabilitation are the primary targets This book presents the combination of emergent technologies in healthcare applications and robotics science such as soft robotics force control novel sensing methods brain computer interfaces serious games automatic learning and motion planning From the clinical perspective case studies are presented for testing and evaluating how those robots interact with humans analyzing acceptance perception biomechanics factors and physiological mechanisms of recovery during the robotic assistance or therapy Interfacing Humans and Robots for Gait Assistance and Rehabilitation will enable undergraduate and graduate students of biomedical engineering rehabilitation engineering robotics and health sciences to understand the

clinical needs technology and science of human robot interaction behind robotic devices for rehabilitation and the evidence and implications related to the implementation of those devices in actual therapy and daily life applications *Robots Won't Save Japan* James Adrian Wright, 2023-02-15 *Robots Won't Save Japan* addresses the Japanese government's efforts to develop care robots in response to the challenges of an aging population rising demand for eldercare and a critical shortage of care workers Drawing on ethnographic research at key sites of Japanese robot development and implementation James Wright reveals how such devices are likely to transform the practices organization meanings and ethics of caregiving if implemented at scale This new form of techno welfare state that Japan is prototyping involves a reconfiguration of care that deskills and devalues care work and reduces opportunities for human social interaction and relationship building Moreover contrary to expectations that care robots will save labor and reduce health care expenditures robots cost more money and require additional human labor to tend to the machines As Wright shows robots alone will not rescue Japan from its care crisis The attempts to implement robot care instead point to the importance of looking beyond such techno fixes to consider how to support rather than undermine the human times spaces and relationships necessary for sustainably cultivating good care
