

being eaten by predators. This is why most predators have evolved to have excellent senses and speed. Prey, however, can have a variety of defenses to avoid being eaten.

Prey defenses might be mechanical, chemical, physical, or behavioral. Mechanical defense examples include thorns on plants or hard shells on turtles. Chemical defenses are usually in the form of toxins or bad smelling odors. An example of physical/behavioral defenses include camouflage by blending in with their environment, or mimicking other poisonous/toxic organisms.

Invasive Species

Invasive species are species that are not usually found in a certain ecosystem and can cause significant harm when introduced to a new area. An invasive species is harmful to an ecosystem because they throw off the balance of interactions between species currently in the ecosystem, especially when the invasive species can outcompete the original species. One example of an invasive species is the Kudzu plant, that was introduced to the United States from Asia as a way to reduce soil erosion, which worked very well. However, the people did not realize that the plant can grow as much as one foot per day and began suffocating the other plants nearby stealing their resources and diminishing the natural biodiversity of the ecosystem.
