
A2 Investigating Populations questions and answers 2023-2024 with complete solution

The vegetation on a large heap of waste from an old mine was investigated. The table shows the results of the measurements of certain factors in 1m² frame quadrats placed on the south-facing slope.

Which of the factors measured are abiotic? - Ph of the soil, moisture and angle.

The vegetation on a large heap of waste from an old mine was investigated. The table shows the results of the measurements of certain factors in 1m² frame quadrats placed on the south-facing slope.

Describe how the investigators could obtain the value for vegetation cover in each quadrat: - Sub-divide the quadrat and count those where the cover is over 50%.

The correlation between vegetation cover and soil moisture content was tested statistically. These two factors were found to be positively correlated and $p < 0.05$. Explain what this result means: - Increasing the vegetation content is related to the increase in moisture content so the correlation is significant and it is not due to chance.

At first the waste heap had no plants growing on it. Some of the first plants to colonise it were small herbaceous plant. Explain one way in which colonisation by herbaceous plants could change the physical environment: - Nitrogen fixation occurs so there is an increase in the concentration of nitrate.

Describe how the population size of a species of bird that fed mainly on the moth larvae would be likely to change between 1970 and 1980 - At first, the population would slowly fall but it rises again. The peak/trough later than those of larvae.

Larch trees lose their leaves in autumn. When numbers of larvae are large in one year the leaves in the following year are shorter. Suggest an explanation for this. - When the leaves are short, photosynthesis is decreased. Less food available for the production of new needles.

What is meant by an abiotic factor? - Non-living factors of an ecosystem.

Describe how you would collect the necessary data to estimate the size of a population by the mark-release-recapture technique. - Capture, count and mark the sample (avoid detection) carefully. Release it with enough time for it to disperse throughout the population.
