## MAPLE TREE LIFE CYCLE

Maple trees are able to reproduce starting around 50 years old. Maple trees reproduce by producing winged seeds, which means they develop seeds within a fruit.

When warmer weather arrives and the snow melts, it's the start of maple tree reproduction. In response to the season change, the maple tree grows leaves.

### 1. Flowers

As spring progresses, the tree sprouts flowers. They come in a variety of colors such as green, yellow, orange and red. Maple trees have two types of flowers. Male flowers have many stamens called stamens. On each stamen is a little knob called an anther. Anthers produce a fine yellow powder called pollen. The pollen lands on female flowers stalk called the stigma. Now seeds can be formed.

### 2. Fruit/Samara

Around midsummer, the flowers fall from the tree. In its place, the tree grows fruit. Each female flower makes two seeds. A fruit grows around them. This type of fruit called a samara. The fruit appears as two, v-shaped spinners, commonly called helicopters by children. When they are ready, they release and spin towards the ground.

### 3. Germination

In the moist ground, a maple seed germinates and sprouts in just a few days.

### 4. Seedling

More leaves appear as the seedling grows upward. The leaves make food for the whole plant. New leaves grow from a bud at the very top of the plant.

### 5. Tree

It takes many years for a maple seedling to become a full-grown tree. Its trunk grows taller and thicker. Branches grow from the trunk. Twigs grow from the branches, and leaves grow on the twigs.
