How do sediments become a sedimentary rock?

Rocks are weathered and eroded over time to become sediments. Over thousands of years, sediments have been compacted and cemented together to form sedimentary rock.

How does a metamorphic rock become an igneous rock?

A metamorphic rock can become an igneous rock by melting into magma underneath the earth's crust and cooled to form an igneous rock.

Describe two ways in which an igneous rock can become a metamorphic rock.

Way 1: An igneous rock can be weathered and eroded into sediments. Then the sediments are compacted and cemented together to form a sedimentary rock. Finally, the sedimentary rock undergoes a tremendous amount of heat and pressure deep within earth to form a metamorphic rock.

Way 2: An intrusive igneous rock is exposed to heat and pressure under the earth's crust and becomes a metamorphic rock.

How does magma become sediments?

Extrusive igneous rocks are weathered and eroded into sediments.
