Google Mock Manual:

Modern C++ Programming with Test-Driven Development Jeff Langr, 2013-10-10 If you program in C you've been neglected. Test driven development (TDD) is a modern software development practice that can dramatically reduce the number of defects in systems, produce more maintainable code, and give you the confidence to change your software to meet changing needs. But C programmers have been ignored by those promoting TDD until now. In this book, Jeff Langr gives you hands-on lessons in the challenges and rewards of doing TDD in C. Modern C Programming With Test Driven Development, the only comprehensive treatment on TDD in C, provides you with everything you need to know about TDD and the challenges and benefits of implementing it in your C systems. Its many detailed code examples take you step by step from TDD basics to advanced concepts. As a veteran C programmer, you're already writing high quality code and you work hard to maintain code quality. It doesn't have to be that hard. In this book, you'll learn how to use TDD to improve legacy C systems, how to identify and deal with troublesome system dependencies, how to do dependency injection (which is particularly tricky in C), how to use testing tools for C that aid TDD, new C 11 features that facilitate TDD. As you grow in TDD mastery, you'll discover how to keep a massive C system from becoming a design mess over time, as well as particular C trouble spots to avoid. You'll find out how to prevent your tests from being a maintenance burden and how to think in TDD without giving up your hard-won C skills. Finally, you'll see how to grow and sustain TDD in your team. Whether you're a complete unit testing novice or an experienced tester, this book will lead you to mastery of test driven development in C. What You Need: A C compiler running under Windows or Linux, preferably one that supports C 11. Examples presented in the book were built under gcc 4.7.2, Google Mock 1.6 (downloadable for free), it contains Google Test as well as an alternate C unit testing tool. Most examples in the book are written for Google Mock, but it isn't difficult to translate them to your tool of choice. A good programmer's editor or IDE, cmake, preferably. Of course, you can use your own preferred make tool. CMakeLists.txt files are provided for each project. Examples provided were built using cmake version 2.8.9. Various freely available third-party libraries are used as the basis for examples in the book. These include cURL, JsonCpp, Boost, filesystem, date_time, gregorian, algorithm, assign. Several examples use the boost headers libraries. Only one example uses cURL and JsonCpp.

Department Store Merchandise Manuals ,1917 Customary International Humanitarian Law Jean-Marie Henckaerts,Louise Doswald-Beck,2005 In 1996 the International Committee of the Red Cross alongside a range of renowned experts embarked upon a major international study into current state practice in international humanitarian law in order to identify customary law in this area This book is the result of that study a comprehensive analysis of the customary rules of international humanitarian law applicable in international and non international armed conflicts Given that important treaties in this area have not yet been universally ratified this is a publication of major importance carried out at the express request of the international community In so doing this study identifies the common core of international humanitarian law binding on all parties to all armed conflicts **The Litigation Manual** Priscilla Anne Schwab,2007 Innovation is increasingly recognized as a vitally important social and economic phenomenon worthy of serious research study Firms are concerned about their innovation ability particularly relative to their competitors Politicians care about innovation too because of its presumed social and economic impact However to recognize that innovation is desirable is not sufficient What is required is systematic and reliable knowledge about how best to influence innovation and to exploit its effects to the full Gaining such knowledge is the aim of the field of innovation studies which is now at least half a century old Hence it is an opportune time to ask what has been achieved and what we still need to know more about This is what this book sets out to explore Written by a number of central contributors to the field it critically examines the current state of the art and identifies issues that merit greater attention The focus is mainly on how society can derive the greatest benefit from innovation and what needs to be done to achieve this However to learn more about how society can benefit more from innovation one also needs to understand innovation processes in firms and how these interact with broader social institutional and political factors Such issues are therefore also central to the discussion here Handbook of Russian Literature Victor Terras,1985-01-01 Profiles the careers of Russian authors scholars and critics and discusses the history of the Russian treatment of literary genres such as drama fiction and essays Manuals Institute on Administrative Procedures for County Officers,1950
