Watershed Models Vijay P. Singh, Donald K. Frevert, 2010-09-28 Watershed modeling is at the heart of modern hydrology supplying rich information that is vital to addressing resource planning environmental and social problems Even in light of this important role many books relegate the subject to a single chapter while books devoted to modeling focus only on a specific area of application Recognizing the

Gertler, Julide Koracin, 2009-01-14 Any alteration of the natural processes occurring on a piece of land will have expected as well as unanticipated effects and those effects have little regard for arbitrary human boundaries Consequently it is not enough for land managers to consider only how they might maintain the parcels for which they are responsible they must also anticipate

Climate and Atmospheric Dynamics and Predictability Ioannis Pytharoulis, Petros Katsafados, 2021-01-19 Earth's weather and climate are complex nonlinear systems of dynamical thermodynamical processes that are highly variable on all spatiotemporal scales The analysis and prediction of those processes and their feedbacks with the other systems of the biosphere land and ocean from the viewpoints of both atmospheric science and dynamics thermodynamics can improve our knowledge and have a great impact on society The main aim of this Special Issue was to gather observational theoretical and modeling studies on the

dynamics of the atmosphere and the climate system as well as on their predictability at different spatiotemporal scales
