this volume presents a comprehensive investigation into the relationship between argumentation theory and the philosophy
of mathematical practice Argumentation theory studies reasoning and argument and especially those aspects not addressed
or not addressed well by formal deduction The philosophy of mathematical practice diverges from mainstream philosophy of
mathematics in the emphasis it places on what the majority of working mathematicians actually do rather than on
mathematical foundations The book begins by first challenging the assumption that there is no role for informal logic in
mathematics Next it details the usefulness of argumentation theory in the understanding of mathematical practice offering
an impressively diverse set of examples covering the history of mathematics mathematics education and perhaps surprisingly
formal proof verification From there the book demonstrates that mathematics also offers a valuable testbed for
argumentation theory Coverage concludes by defending attention to mathematical argumentation as the basis for new
perspectives on the philosophy of mathematics School Science and Mathematics School Science and Mathematics, 1917
