1.1 INTRODUCTION

Each of the past three centuries has been dominated by a single technology. People were doing lot of paper work in organizations because, lack of advance systems which will help them in their day today work. The 18th century was the time of the great mechanical systems accompanying the Industrial revolution. Computer industry has made spectacular progress in short time. During the first two decades of their existence, Computer systems were highly centralized, usually within the single large room. A medium size company or university might have had one or two computers, while large institutions had at most few dozen. The idea that within 20 years equally powerful computers smaller than postage stamps would be mass-produced by the millions was pure science fiction.

The merging of computers and communications has had a profound influence on the way computer systems are organized. The old model of single computer serving all of the organization computational need has been replaced by one which the-large no of separate but interconnected computers do the fob. These systems are called has computer network.

A network is a group of two of more computer systems sharing services and interacting in some manner. This interaction is, accomplished through a shared communication link, with the shared components being data. Put simply a network is a
