Engineering Statics with MATLAB® Lester W. Schmerr Jr., 2024-03-07 This text makes use of symbolic algebra and vector matrix algebra to demonstrate a new approach to learning statics Symbolic solutions are obtained together with the types of solutions covered in other texts so that students can see the advantages of this new approach This innovative text is an extension of second generation vector Statics courses to a new third generation matrix vector Statics course a course that addresses deformable as well as rigid bodies and employs MATLAB MATLAB is used as a calculator whose built in functions are used to solve statics problems This text uses vectors and matrices to solve both statically determinate rigid body problems and statically indeterminate problems for deformable bodies The inclusion of statically indeterminate problems is unique to this text It is made possible by using symbolic algebra and a new simplified vector matrix formulation that combines the equations of equilibrium the homogeneous solutions to those equations and a description of the flexibilities found in the deformable elements of a structure to solve directly for the unknown forces moments
