

LIGAND FIELD THEORY

Chemists often consider the d-orbitals of a central metal ion as a starting point for understanding the nature of all coordination compounds. One of the main steps of applying the Crystal Field Theory to ligand field theory is ligand field theory, which studies the effect of ligands on the energy of d-orbitals in the metal complex.

There are two ways to approach ligand field theory. In the first, the effect of ligands on the energy of d-orbitals is studied. In the second, the energy of d-orbitals is studied, and the effect of ligands on the energy of d-orbitals is studied.
