

100-hour service

4. Equalizer lever

Equalizer lever grease fitting

At the end of 100 hours of operation lubricate the fitting on the equalizer lever near the hydraulic system controls.

5. Hydraulic system

Filter cap and test cock

At the end of each 100 hours of operation, check hydraulic system oil level, by opening test cock on front of housing. If no oil rises out of the test cock, add SAE 10W or SAE 15W-30 oil at filler plug located at the top of housing.

Cleanliness is the most important factor in adding or changing oil in the hydraulic system. One small particle of dirt beneath any of the valves may cause the entire system to be inoperative. It is recommended that only new oil be used. This assures the operator that no dirt or dirt has entered the hydraulic system with the oil.

The more oil used in hydraulic system is free from water. This will assure satisfactory operation and prevent water from freezing in system.

6. Universal L-Power Bleed

Universal L-Power Bleed grease fitting

At the end of 100 hours of operation, lubricate the fitting on the rear of the load control valve. Also lubricate the three fittings on the right and left lift links. Use two shots of SAE multipurpose grease at each of these fittings.

7. Clutch throw-out bearing

Clutch throw-out bearing grease hole

Every 100 hours, lubricate clutch throw-out bearing. To lubricate bearing, remove cover from grease hole and place nozzle of grease gun on grease fitting. Lubricate with SAE multipurpose grease.

8. PTO lever (load speed PTO)

PTO lever grease fitting

When in use, the PTO lever grease fitting should be lubricated every 100 hours. Lubricate with two strokes of grease gun containing SAE multipurpose grease.

200-hour service

9. Air cleaner cap

At the end of 200 hours of tractor operation clean inside of air cleaner cap with cleaning solvent or kerosene.

10. Air cleaner

At the end of 200 hours of tractor operation, the air intake tube (running through center of air cleaner) should be checked out. This operation will assure that a sufficient volume of air is being drawn into the cylinders. To check oil tube, remove oil cap from bottom of cleaner and the cap from the top of the tube. Brush out center of tube with a cloth wrapped around a stick.

11. Battery

At least once every 200 hours, check amount of water in battery cells. If the water level is low, add distilled water. Water level should never be allowed to go below top of the cell plates. Avoid over-filling the battery or over-filling of the electrolyte will result.

In freezing weather, do not add water until after the engine has started, as water will not mix with the electrolyte until the generator passes a charging current into the battery.

Every 200 hours, wipe off top of the battery with a cloth dampened with water. If corrosion is present around terminal connections, loosen it with a stiff brush and then apply a solution consisting of 1 1/2-pint of baking soda added to a quart of water. Then flush battery with clear water. After cleaning, examine vent holes in each top, making sure they are open. Battery connections must be clean as well as tight. A thorough coating of petroleum jelly on each terminal connection will greatly aid in retarding accumulation of corrosion.

12. Belt pulley

Belt pulley—Oiler oil drain plug

At the end of 200 hours of operation, the oil in the belt pulley should be checked. To check oil in belt pulley, remove plug on side of pulley housing and fill with SAE 40 multipurpose lubricant to level of filler hole.

13. Crankcase lubrication
