Characteristics of gear shifting

The shifting up or down of the transmission is carried out according to the shift map stored in the memory of the controller.

There are three types of shift map according to the condition of the input signals (for machines mounting an engine with mechanical governor, there are two types, excluding economy mode). The settings for each mode are as shown in the following table.

Mode	Setting conditions
Braking mode	When either of the following conditions are satisfied. 1. Rear brake signal ON (foot brake, retarder, or emergency brake applied) 2. Accelerator pedal released.
High-power mode	When the following three conditions are satisfied. 1. Rear brake signal OFF (foot brake, retarder, or emergency brake not applied) 2. Accelerator pedal depressed. 3. Economy mode switch off
Economy mode (only machine equipped with electronic governor)	When the following three conditions are satisfied. 1. Rear brake signal OFF (foot brake, retarder, or emergency brake not applied) 2. Accelerator pedal depressed. 3. Economy mode switch off

Braking mode:

The shift-down point and shift-up point are both raised, and the engine speed is kept higher to ensure the amount of oil for retarder cooling, and to increase the effect of using the engine as a brake.

High-power mode:

The mode is aimed at providing maximum production by using the machines power to its utmost limit. However, when the machine load is light (high acceleration), such as when the machine is traveling empty, the machine acceleration is detected and the gear is shifted up early to improve the acceleration. It uses an acceleration sensing shift point to improve fuel consumption, noise, and shock when shifting gear.

Economy mode: (only machine equipped with electronic governor)

When the machine is being used under light load, such as when traveling empty or when traveling on flat ground, the shift-up point and shift-down point are made lower to keep the engine speed low, thereby improving fuel consumption, noise, and shock when shifting gear. In this mode, the engine output is kept to 85% of the maximum engine output.
