

VARN **Kompac** **Automatic Dampener**

III[®]
U.S. Patent No. 4,455,008

Operators' Manual

EFFECTIVE FOR ALL KOMPAC MODELS

© 1978 Varn Products Co., Inc.

THE THEORY AND EXPLANATION OF KOMPAC

THE PLATE FORM ROLLER ROLLS ACROSS THE PLATE, WITH THE NON-IMAGE AREA OF THE PLATE TAKING FOUNTAIN SOLUTION (WATER) AND THE IMAGE AREA OF THE PLATE SPLITTING A LAYER OF INK WITH THE PLATE FORM ROLLER. THE KOMPAC II PLATE FORM ROLLER IS BOTH WATER AND INK RECEPTIVE

INK AND FOUNTAIN SOLUTION MILLED UNDER PRESSURE AT ROLLER NIP

ALL SURPLUS FOUNTAIN SOLUTION AND INK RETURNED TO NIP RESERVOIR AT EACH REVOLUTION OF PLATE — READY FOR NEXT IMPRESSION

WARNING: Kompac II rollers have inward slip. Do not run Kompac unit without safety cover in place.

... The Kompac II Automatic Dampening System is an engineering breakthrough which gives automatic ink-water balance to small offset presses. It is a complete replacement dampener installed on a small offset press after the original dampening system is removed and stored. The Kompac II System is a continuous feed, 2-roller system which dampens the plate directly from a plate form roller. The plate form roller is gear driven by the plate cylinder gear and operates drag-free at the same surface speed as the plate. Once the Kompac II System is installed on the duplicator and the proper settings made to the unit, no other adjustments are necessary from job to job and stock to stock.

By splitting the ink film with the image on the plate, the Kompac II System adds to the inking capabilities of a duplicator. This fact, coupled with the finer ink film and the lack of emulsification in the inking train, permits the Kompac II System to run larger solids, finer screens and halftones and smaller reverses than can normally be run by any of the three current dampening systems.

The Kompac II Automatic Dampening System consists of a metering

roller and a micro ground plate form roller. The nip between these rollers carries a constant level of fountain solution. Both the plate form roller and the metering roller split and share a film of ink with the plate, and both carry ink in the image area. The fountain solution is milled into the ink under pressure at the inward nip, forming microscopic droplets of fountain solution emulsified in the ink. The emulsified fountain solution in ink is rolled across the plate by the plate form roller which functions as a giant squeegee delivering an extremely thin and uniform film of fountain solution and ink. Since the emulsification takes place away from the ink form and distributing rollers, there is virtually no chance of emulsification working back to the ink train. The plate form roller builds up a small surplus of fountain solution on its trailing edge, which is automatically returned to the nip reservoir when the plate gap passes under the plate form roller. This automatic return feature eliminates a build-up of water in the system which would require a rebalancing of ink and water. By having this reserve of fountain solution available at every plate revolution, the Kompac II System offers almost instant start-up from job to job and is unaffected by changes in room temperature, press stops, drafts, etc.

Kompac Ii Operator Manual
