Abstract

Flareview SLR optical system for accurate measurements

The CLM single-core-reflex optical system allows precise energy and structure. For the microscope shown, the small area to be measured. The optical system is also virtually lossless, eliminating the absorption of light from a sample the microscope cannot view.

Acceptable angles of only 1° for L5-100 and $1/2^\circ$ for L5-700 allow accurate measurements of small specimen areas. In addition, optional stacking lenses can be used to measure areas as small as 0.1 μm when using L5-100 and all of most other series L5-700.

To increase the versatility of the **LS-6000** and **LS-600**, both meters are equipped with user calibration and color correction functions. The user calibration function allows the meter to be calibrated to a user selected standard instead of the preset **Konica Minolta** standard. The function can also be used to standardize the response of several meters. The color correction function allows the response of the meter to be adjusted when measuring colored substrates.

Luminescence spectra and peak luminescence intensities

In addition to measurements of the present luminance, the L^* and L^*a^* can also determine the present ratio of the measured luminance to a luminance value stored in memory as well as the peak luminance or luminance ratio measured.

Initially, the relative spectral responsivity of the luminance meter should satisfy $Y(1)$ of the fixture eye for photopic vision. As shown in the graph above, the relative spectral responsivity of Konica Minolta Luminance Meters **LS-1000** **LS-100** is close to the $D(2)$ spectral luminance efficiency $Y(2)$ (IEC Commission Internationale de l'Eclairage) ($1000 \rightarrow$ symbol).

The degree to which the influence of light from outside the defined measuring area is eliminated is an important factor in the performance of luminance meters. In Florida Atlantic University's studies, the new factor is used to define

0.5%, down. Fair object with extremely high luminance is just outside the meter's measuring area.

The graph at right shows the effect when a bright point is viewed from A inside the measuring area to B just outside the measuring area. If the measured value at A is defined as 100%, the measured value at B would be less than 0.5%.
