Natural and Synthetic Waxes Ernst J. Krendlinger, Uwe H. Wolfmeier, 2022-10-31 Natural and Synthetic Waxes A compilation of all relevant information for the production and use of waxes in technical applications Waxes are among the oldest organic substances used by mankind Before all others beeswax is known to have played a role in human history for thousands of years But over time many other wax species have been detected and exploited and prepared for different utilizations Today we possess knowledge of a great variety of different types of waxes Unfortunately there still is no broadly accepted definition of a wax for the relatively few wax chemists waxes are usually defined by their physico chemical properties more than by their chemical constitution Waxes are not uniform but oligomeric and polymeric substances not simply describable with a chemical formula The realm of waxes encompasses fully or partly natural refined partly or fully synthetic products which can be extended by wax like products which do not fulfil all definition criteria Waxes are offered in different forms like pellets granules powders or micropowders Their number of technical applications runs into thousands However waxes in most cases are just adjuvants or additives and with few exceptions like candles not known to a broader public Only few publications over the last decades tried to present a more comprehensive overview of their chemistry chemical composition their physical and analytical properties their applications and their sometimes astonishing history Based on personal experience and expertise the authors intend to present an overview on the main classes of waxes their origin history future and potential fate Economical aspects like market size and development ecological impacts and challenges and regulatory issues are also addressed Waxes are indispensable products in everyday life and in industry and technology though mostly not even visible or distinguishable to experts They deserve more than the role of a poor cousin in chemistry and technology

A Stocktake of Global Climate Mitigation Mr. Simon Black,Ian W.H. Parry,Karlygash

Zhunussova,2023-11-21 Urgent and aggressive action to cut greenhouse gas emissions this decade is needed As countries take stock of the Paris Agreement this Note provides IMF staff s annual assessment of global climate mitigation policy Global ambition needs to be more than quadrupled emissions cuts of 50 percent below 2019 levels by 2030 are needed for 1.5 degrees Celsius but current targets would only achieve 11 percent We provide options for ratcheting up ambition equitably Implementation could be accelerated via agreements on minimum carbon prices Drastic increases in mitigation investment are needed requiring policies to shift private sector incentives Climate finance should be scaled up with a new goal aligned with needs in developing countries The development and diffusion of low carbon technologies should be accelerated collaboratively Overall the Paris Agreement is making progress but a response to the Global Stocktake that prioritizes decisive action this decade is critical
