generate test cases and perform model analysis can grow dramatically even exponentially overwhelming the test generation and analysis applications In this work a new technique for representing the operational profile is proposed to mitigate the complexity issue for statistical test case generation The use of a state based requirements specification model as the basis of the operational profile leverages parallelism to reduce the visible size of the model The specification model can then be extended to include conditional probabilities of input data occurrence This work also proposes a statistical testing framework using this specification based operational profile to generate and execute test cases Such a framework allows us to evaluate the effectiveness and efficiency of this statistical testing technique
