Shewry, R. Casey, 2012-12-06 Seeds provide more than half of the world's intake of dietary protein and energy and thus are of immense economic cultural and nutritional importance Proteins can account for up to 40% of the dry weight of various types of seeds thereby making a large contribution to the nutritional quality and processing properties of seeds It is therefore not surprising that seed proteins were among the first plant components to be systematically studied some 250 years ago and have been a major focus of research over the past 100 years The properties and behaviour of seed proteins pervade modern life in numerous ways For example legume and cereal proteins are used in the production of a wide range of meat free foods the process of bread making is dependent on the physical chemical properties of wheat seed proteins and in developed as well as developing countries nutritional deficiencies among vegetarian diets are avoided through balancing legume and cereal seeds as sources of dietary proteins Understanding seed proteins in order to improve their composition and properties and to increase their concentrations will thus continue to be an important research objective for the future The present volume represents the culmination of a long discussed plan of the editors to bring together the best international authorities in order to compile a definitive monograph on biological biochemical molecular and genetic aspects of seed proteins      *Physiology and Molecular Biology of Stress Tolerance in Plants* K.V. Madhava Rao, A.S. Raghavendra, K. Janardhan Reddy, 2006-01-16 Increasing agricultural productivity to meet the demands of growing population is a challenging task Abiotic stresses are among the major limiting factors on agriculture The knowledge and research programmes on the physiology and molecular biology of stress tolerance are certainly helpful to counteract this negative effect to a great extent The present literature deals in detail mostly with plant responses to different abiotic stresses There have been extensive studies in the past few decades on the physiology and biochemistry of plant responses to abiotic stress conditions in the laboratory as well as in the field However the interest has shifted to molecular biology of stress tolerance modes of installing tolerance mechanisms in crop plants Microarray technology functional genomics development of high throughput proteomics would benefit and guide the physiologists molecular biologists and biotechnologists to enhance stress tolerance in plants We therefore felt very strongly that there is an immediate and urgent need for a textbook on this important topic This book would be an ideal
