unfavourable trends in e.g. fertility, udder health and locomotion in some major dairy cattle breeds due to a large increase in production and insufficient consideration of functional traits in the breeding goals. Such unfavourable trends in some functional traits increase costs. Additionally, the enlargement of herds leads to less available labour time per individual cow. This asks for cows that are easy to handle. At the same time, society is demanding a higher welfare standard of animals. These contradicting developments have increased the desire for so-called more robust animals. Robustness can be defined as the ability to maintain homeostasis in commonly accepted and sustainable herds of the near future or the ability of the cow to function well in the environment she lives in as well as in a wide range of climates and production systems. This book contains a series of articles dealing with the concept of robustness, including aspects like evolution, genetics, environment, animal health and welfare and integrity. Besides the major functional traits, also the links to energy balance, hot climatic conditions and the attitude and input of stakeholders towards robustness as part of the breeding program are discussed. This book is the first attempt to summarise the available knowledge concerning this topic in cattle, making this book unique. The contributions are from authors of 16 countries from all over the world. However, the focus is presently on farm animal level, while in future, robustness of the whole production system may also require additional attention. **Biotechnology, Education** Diana Airozo, 1992

Educational Curricula Jennifer N. Casey, 2008. In formal education, a curriculum plural curricula is the set of courses and their content offered at a school or university. As an idea, curriculum stems from the Latin word for race course, referring to the course of deeds and experiences through which children grow and mature in becoming adults. Crucial to the curriculum is the definition of the course objectives that usually are expressed as learning outcomes and normally include the program's assessment strategy. These outcomes and assessments are grouped as units or modules and therefore the curriculum comprises a collection of such units, each in turn comprising a specialised specific part of the curriculum. So a typical curriculum includes communications, numeracy, information technology and social skills units with specific specialised teaching of each. This book presents research on educational curricula from around the world.
