Herring, 2005-12-30 Genetic engineering has quickly become one of the more controversial issues of our time Herring provides a detailed history of the debate in a fair and balanced manner using proponents points of view to make individual cases both pro and con Narrative chapters cover such topics as the Human Genome Project gene splicing cloning genetically altered foods and DNA and crime solving Students and the general public will find a comprehensive survey of the genetic engineering debate Appendices include statements from Robert P George and Peter Singer two of the most prominent scholars on the subject and a bibliography of print and electronic resources for further research *The Ethics of Food* Gregory E. Pence, 2002 Food makes philosophers of us all Death does the same but death comes only once and choices about food come many times each day In *The Ethics of Food* Gregory E Pence brings together a collection of voices who share the view that the ethics of genetically modified food is among the most pressing societal questions of our time This comprehensive collection addresses a broad range of subjects including the meaning of food moral analyses of vegetarianism and starvation the safety and environmental risks of genetically modified food issues of global food politics and the food industry and the relationships among food evolution and human history Will genetically modified food feed the poor or destroy the environment Is it a threat to our health Is the assumed healthfulness of organic food a myth or a reality The answers to these and other questions are engagingly pursued in this substantive collection the first of its kind to address the broad range of philosophical sociological political scientific

and technological issues surrounding the ethics of food History of Soybean Variety Development, Breeding and Genetic Engineering (1902-2020) William Shurtleff; Akiko Aoyagi, 2020-06-25 The world's most comprehensive well documented and well illustrated book on this subject With extensive subject and geographic index 152 photographs and illustrations mostly color Free of charge in digital format on Google Books Stolen Harvest Vandana Shiva, 2016-01-14 For the farmer the seed is not merely the source of future plants and food it is a vehicle through which culture and history can be preserved and spread to future generations For centuries farmers have evolved crops and produced an incredible diversity of plants that provide life sustaining nutrition In India alone the ingenuity of farmers has produced over 200 000 varieties of rice many of which now line store shelves around the world This productive tradition however is under attack as globalized corporate regimes increasingly exploit intellectual property laws to annex these sustaining seeds and remove them from the public sphere In Stolen Harvest The Hijacking of the Global Food Supply Shiva explores the devastating effects of commercial agriculture and genetic engineering on the food we eat the farmers who grow it and the soil that sustains it This prescient critique and call to action covers some of the most pressing topics of this ongoing dialogue from the destruction of local food cultures and the privatization of plant life to unsustainable industrial fish farming and safety concerns about corporately engineered foods The preeminent agricultural activist and scientist of a generation Shiva implores the farmers and consumers of the world to make a united stand against the genetically modified crops and untenable farming practices that endanger the seeds and plants that give us life Responsible Living Ron B. Pilgrims in Medicine: Conscience, Legalism and Human Rights

Thomas Faunce, 2005-02-01 This arrestingly novel work develops a normative synthesis of medical humanities virtue ethics medical ethics health law and human rights It presents an ambitious complex and coherent argument for the reconceptualisation of the doctor patient relationship and its regulation utilising approaches often thought of as being separate if not opposed virtue based ethics and universal human rights The case is argued gracefully with moderation but also with respect for opposing positions The book's analysis of the foundational professional virtue of therapeutic loyalty is an original departure from the traditional discourse of patient autonomy and the ethical and legal duties of the medical practitioner The central argument is not merely presented as bookends in the introduction and conclusion It is cogently represented in each chapter and section and measured against the material considered A remarkable feature is the use of aptly selected canonical literature to inform the argument These references run from Hesse's *The Glass Bead Game* in the abstract to Joyce's *Ulysses* in the conclusion They include excerpts from and discussion about Bergman Borges Boswell Tolstoy de Beauvoir Chekhov Dostoevsky Samuel Johnson Aristotle Orwell Osler Chaucer Schweitzer Shakespeare Thorwalds Kafka and William Carlos Williams Such references are used not merely as an artistic and decorative leitmotif but become a critical narrative element and another complex and rich layer to this work The breadth and quality of the references are testimony to the author's clear understanding of the modern law and literature movement This work provides the basis of a medical school course As many medical educators as possible should also be encouraged to read this work for the insights it will give them into using their own personal life narratives and those of their patients to inform their decision making process This thesis will also be of value to the judiciary whose members are often called upon to make normatively difficult judgments about medical care and medical rules The human rights material leads to a hopeful view of an international movement toward a universal synthesis between medical ethics and human rights in all doctor patient relationships

Ethics and the politics of food Matthias Kaiser, Marianne Elisabeth Lien, 2023-08-28 Food has emerged as a political topic par excellence It is increasingly involved in controversies at a transnational level in relation to issues of access dominance trade and control in a shared global environment At the same time innovations in biotechnology and animal domestication have brought ethics to the forefront of food debates Thus we live in an era when the ethics and the politics of food must come together This book addresses the ethics and the politics of food from a broad range of academic disciplines including sociology philosophy nutrition anthropology ethics political science and history The chapters expose novel problem areas and suggest guidelines for approaching them Topics range from fundamental issues in philosophy to sustainability from consumer trust in food to ethical toolkits Transparency power and responsibility are key concerns and special attention is given to animal welfare emerging technologies in food production and marine domestication Together the chapters represent a wide range of academic responses to the fundamental dilemmas posed by food production and food consumption in the contemporary world

From Naked Ape to Superspecies David Suzuki, Holly Dressel, 2009-07-01 For millennia we lived in harmony with the Earth taking only what we required to survive But in just the past few centuries we have used our powers to satisfy our obsession with consumption and new technology without regard for the consequences And in doing so we have exploited our surroundings on an unprecedented scale In this revised and updated edition of From Naked Ape to Superspecies David Suzuki and Holly Dressel lucidly describe how we have evolved beyond our needs trampling other species believing that we can make the Earth work the way we want it to And they introduce us to the people who are fighting back those who are resisting the inexorable advance of the global economy juggernaut the people whose voices are difficult to hear over the din of corporate public relations machines We learn about how human arrogance demonstrated by our disregard for the small and microscopic species that constitute the Earth's engine and our reckless use of technological inventions like powerful herbicides or genetically engineered crops is threatening the health of our children and the safety of our food supply

Bringing Life to Ethics Michael W. Fox, 2001-01-11 Enlarges the meaning and scope of inquiry into our values relationships and treatment of animals the environment and each other

The Biotechnology Debate Bernice Bovenkerk, 2012-01-04 This book grounds deliberative democratic theory in a more refined understanding of deliberative practice in particular when dealing with intractable moral disagreement regarding novel technologies While there is an ongoing vibrant debate about the theoretical merits of deliberative democracy on the one hand and more recently empirical studies of specific deliberative exercises have been carried out these two discussions fail to speak to one another Debates about animal and plant biotechnology are examined as a paradigmatic case for intractable disagreement in today's pluralistic societies This examination reveals that the disagreements in this debate are multi faceted and multi dimensional

and can often be traced to fundamental disagreements about values or worldviews One of the acute insights to emerge from this examination is that deliberation can serve different purposes vis vis different types of problem In the case of deeply unstructured problems like the modern biotechnology debate the aim of inclusion is more appropriate than the aim of consensus This book highlights the importance of political culture and broader institutional settings in shaping the capacity and propensity of citizens to engage in deliberation and the degree to which governments are prepared to relinquish authority to deliberative mini publics Robyn Eckersley University of Melbourne Australia *Handbook of Developmental Science, Behavior, and Genetics* Kathryn E. Hood, Carolyn Tucker Halpern, Gary Greenberg, Richard M. Lerner, 2011-06-28 The Handbook of Developmental Science Behavior and Genetics brings together the cutting edge theory research and methodology that contribute to our current scientific understanding of the role of genetics in the developmental system Commemorates the historically important contributions made by Gilbert Gottlieb in comparative psychology and developmental science Includes an international group of contributors who are among the most respected behavioral and biological scientists working today Examines the scientific basis for rejecting the reductionism and counterfactual approach to understanding the links between genes behavior and development Documents the current status of comparative psychology and developmental science and provides the foundation for future scientific progress in the field *Genetically Modified Planet* C. Neal Stewart, 2004-08-19 Genetically modified plants are currently causing controversy worldwide a great deal has been written about their supposed environmental effects However the newspaper headlines and public debates often provide a level of reasoning akin to this is your brain on genetically modified corn which is to say they exclude or exaggerate the actual scientific research on the impacts of these plants Genetically Modified Planet goes beyond the rhetoric to investigate for concerned consumers the actual state of scientific research on genetically modified plants Stewart argues that while there are indeed real and potential risks of growing engineered crops there are also real and overwhelmingly positive environmental benefits **Genetically Modified Athletes** Andy Miah, 2004-08-02 This is the first book to examine the profound ethical issues raised by the use of genetic technologies in sports asking whether sporting authorities can or even should protect sport from genetic modification **World Hunger** Brian Kenneth Swain, 2007-08-08 Vanguard Corporation an agricultural company led by a greedy and mercurial CEO has developed a new line of genetically modified seed products Designed to significantly increase crop yields and resist drought pests and disease in the hopes of reducing hunger in Third World countries the seeds should also earn huge profits for the firm Vanguard's testing in Belarus Colombia and India initially goes well but midway through the crops development reports begin to emerge of bizarre insect observations linked to incidents of domestic animal slaughter and eventually the death of several people The high growth genetic enhancements engineered into the seeds have been transferred into the insects through their ingestion of the test crops The strains of these super insects are much larger more aggressive and increasingly resistant to pesticides and disease

than their natural counterparts As the insects become more plentiful and widespread Vanguard desperately combats them while dealing with the media environmentalists the government and other distractions Meanwhile scientists entomologists and field operatives frantically work together to eradicate the new species and deal with the fallout of mankind's apathy toward environmental meddling
