p53 Sue Armstrong, 2014-11-20 All of us have lurking in our DNA a most remarkable gene which has a crucial job it protects us from cancer Known simply as p53 this gene constantly scans our cells to ensure that they grow and divide without mishap as part of the routine maintenance of our bodies If a cell makes a mistake in copying its DNA during the process of division p53 stops it in its tracks summoning a repair team before allowing the cell to carry on dividing If the mistake is irreparable and the rogue cell threatens to grow out of control p53 commands the cell to commit suicide Cancer cannot develop unless p53 itself is damaged or prevented from functioning normally Perhaps unsurprisingly p53 is the most studied single gene in history This book tells the story of medical science s mission to unravel the mysteries of this crucial gene and to get to the heart of what happens in our cells when they turn cancerous Through the personal accounts of key researchers p53 The Gene that Cracked the Cancer Code reveals the fascination of the quest for scientific understanding as well as the huge excitement of the chase for new cures the hype the enthusiasm the lost opportunities the blind alleys and the thrilling breakthroughs And as the long anticipated revolution in cancer treatment tailored to each individual patient s symptoms begins to take off at last p53 remains at the cutting edge This timely tale of scientific discovery highlights the tremendous recent advances made in our understanding of cancer a disease that affects more than one in three of us at some point in our lives

25 Years of p53 Research Pierre Hainaut, Klas G. Wiman, 2007-10-05 1 Communication awareness and access to information Given the complexity of the field and the fact that data pertaining to each particular aspects of p53 biology or deregulation are scattered in many different publications it is extremely difficult to access the full scale of relevant information of any specific p53 related topic Review articles despite their fundamental role in disseminating knowledge usually focus only on general mechanisms and do not discuss in detail the many variations that can occur with respect to cell type particular mutation type as well as biological activation context Books such as this one may help in this task by putting into perspective both general considerations on the p53 pathway and more specific information on various aspects of p53 In the longer term however open access to p53 complexity will require the development of knowledge bases accessible through the web and using simple navigation tools to guide users towards the specific information they need Several efforts are

currently being developed in that direction They need to be strengthened and better integrated within the rapidly growing galaxy of web based information sources on molecular and individual variations in cancer

2 Reference functional assays and structural analysis Given the huge diversity of cellular and animal models for wild type or mutant p53 functions it will be important to set up standard universally accepted assays to measure critical p53 protein functions

*A Fatal Inheritance* Lawrence Ingrassia, 2024-05-14 Nominated for the National Book Critics Circle Award in Nonfiction Named a best book of the year by Amazon NPR and Kirkus Weaving his own moving family story with a sweeping history of cancer research Lawrence Ingrassia delivers an intimate gripping tale that sits at the intersection of memoir and medical thriller Ingrassia lost his mother two sisters brother and nephew to cancer different cancers developing at different points throughout their lives And while highly unusual his family is not the only one to wonder whether their heartbreak is the result of unbelievable bad luck or if there might be another explanation Through meticulous research and riveting storytelling Ingrassia takes us from the 1960s when Dr Frederick Pei Li and Dr Joseph Fraumeni Jr first met not yet knowing that they would help make a groundbreaking discovery that would affect cancer patients for decades to come to present day as Ingrassia and countless others continue to unpack and build upon Li and Fraumeni's initial discoveries and to understand what this means for their families In the face of seemingly unbearable loss Ingrassia holds onto hope He urges us to fight like Charlie his nephew who battled cancer his entire life starting with a rare tumor in his cheek at the age of two and to look toward the future as gene sequencing screening protocols CRISPR gene editing and other developing technologies may continue to extend lifespans and perhaps one day even offer cures

**Death** Yun Bo Shi,Yufang Shi,Yonghua Xu,David W. Scott,2013-06-29 This volume contains papers that were presented and discussed at The 1996 International Symposium on Programmed Cell Death which was held in the Shanghai Science Center of the Chinese Academy of Sciences on September 8 12 1996 Apoptosis has attracted great attention in the past several years This is reflected in part by the exponential increase in the number of papers published on the subject While several major scientific conferences have been held in recent years this meeting represents the first major international scientific meeting on programmed cell death held in Asia where fast economic growth promises a bright future for both basic and applied research in biomedical sciences We organized the meeting with the belief that such a gathering would foster a

closer interaction between scientists from the West and those in Asia Research on programmed cell death has expanded so extensively that no one meeting can cover all the important subjects related to apoptosis The Shanghai meeting focused on several key areas ranging from well established ones such as cell death in the immune system to emerging ones such as the role of ECM in regulating cell fate Specifically the subjects presented and discussed included programmed cell death during development the regulation and biochemical mechanisms of lymphocyte apoptosis the involvement of extracellular matrix and its remodeling in programmed cell death genes that cause or prevent cell death and the application of apoptosis toward cancer therapy
