**Notio Nova** George P. Sakalosky,2014-01-31 Notio Nova A New Idea by George P Sakalosky Ph D Here is a new and unique idea that describes both the driving force behind cancer and its potential cure In this book quantum concept and model developed by the author will take you into a territory completely off the commonly accepted research track for understanding carcinogenesis Notio Nova rejects the common view that mutations in DNA produce both a cancer genome and a potential cure instead it suggests that the development of the cancer genome begins in DNA with the production of a chemical bond lesion an ozonide located inside a promoter TATA box in the Replication Origin of the Genome The lesion locks the TATA box switch ON and causes the well known unregulated replication of the cancer genome that sustains itself via various mutations This is the conclusion of a fifty two year study using a new technique in molecular modeling which brought forth the design synthesis and successful testing of three lesion destroying anticancer analogue compounds The conclusion of this new unique research suggests that the old idea of mutation has failed to produce a cure so a new idea must come forth and is here presented About the Author Dr Sakalosky began molecular modeling in 1957 to devise a means for identifying critical energy absorption sites in macromolecular systems He was awarded a doctoral degree at Boston College in 1975 following the completion of interdisciplinary intercollegiate doctoral courses in biochemistry biophysics learning theory and neurochemistry at MIT was accepted as a student member of the MIT Neuroscience Department Tufts University School of Medicine Boston University and Boston College These studies concluded with a doctoral thesis Proton Symmetry Its Implications for learning Theory A Biophysics Concept Dr Sakalosky joined the U S Atomic Energy Commission USAEC in 1963 as a member of the Division of Reactor Development and later served as a member of the office of the Chairman of the U S Atomic Energy Commission The chemical structures in the text are illustrated by Valerie L Pense and Simeon C Daugherty Modelling and Simulation of Sheet Metal Forming Processes Marta C. Oliveira,José Valdemar Fernandes,2020-04-22 The numerical simulation of sheet metal forming processes has become an indispensable tool for the

design of components and their forming processes This role was attained due to the huge impact in reducing time to market and the cost of developing new components in industries ranging from automotive to packing as well as enabling an improved understanding of the deformation mechanisms and their interaction with process parameters Despite being a consolidated tool its potential for application continues to be discovered with the continuous need to simulate more complex processes including the integration of the various processes involved in the production of a sheet metal component and the analysis of in service behavior The quest for more robust and sustainable processes has also changed its deterministic character into stochastic to be able to consider the scatter in mechanical properties induced by previous manufacturing processes Faced with these challenges this Special Issue presents scientific advances in the development of numerical tools that improve the prediction results for conventional forming process enable the development of new forming processes or contribute to the integration of several manufacturing processes highlighting the growing multidisciplinary characteristic of this field
