H2Sim's ease of use and its ability to provide answers to these types of questions make it a powerful educational and policy making tool. The model's structure is ideal for exploring what if questions such as Can fuel cell vehicles FCVs compete economically with current cars if the FCVs are 2.5 times as efficient? Should the hydrogen be produced at fueling stations or at central locations and transported to fueling stations? Future Automotive Fuels and Energy Bruce Morey, 2013-08-05 This book sheds light on three essential questions: 1. What is the likely supply of gasoline and diesel from oil worldwide to power light vehicles and trucks through 2030-2035? 2. Could any other fuel economically replace gasoline? Will different parts of the world answer that question differently? 3. How will the answers to these questions affect what we engineer, make, and drive in 2030-2035? As difficult as it is to predict timing of these events, the book presents reasonable assumptions and alternative scenarios. Since a switch to alternative technologies will require substantial investment, it is critical to have a sense of when. Despite the global reach of the automotive industry, it is unlikely that a solution for one region will fit all. A more reasonable goal is a set of projected ecosystems using differing amounts of oil, electricity, or alternative fuels. From this, automotive managers and leaders can get a sense of how to make business decisions for the future. To frame comparisons, the author qualitatively assesses each alternative against these criteria: 1. energy density 2. scale 3. efficiency of use 4. consumer convenience 5. vehicle technical maturity 6. delivery infrastructure maturity 7. production infrastructure maturity 8. rate of progress. Some alternative fuels will naturally be higher in some categories than others. For example, gasoline has higher energy density but when burned in internal combustion engines has low efficiency. Batteries, on the other hand, have low energy density but are efficient for powering electric motors. For mapping out a long-term future and deciding how best to invest resources, a comparison of these critical criteria should help. The book is concisely written for executives, decision makers, academics, automotive engineers, and others who want or need a long-range view of trends that will influence vehicle fuels for the next 20 years. [The New Consumers](#) Norman Myers, Jennifer Kent, 2013-04-10 While overconsumption by the developed world's roughly one billion inhabitants is an abiding problem, another one billion increasingly affluent new

consumers in developing countries will place additional strains on the earth's resources argue authors Norman Myers and Jennifer Kent in this important new book *The New Consumers* examines the environmental impacts of this increased consumption with particular focus on two commodities cars and meat that stand to have the most far reaching effects It analyzes consumption patterns in a number of different countries with special emphasis on China and India whose surging economies as well as their large populations are likely to account for exceptional growth in humanity's ecological footprint and surveys big picture issues such as the globalization of economies consumer goods and lifestyles Ultimately according to the orman Myers and Jennifer Kent the challenge will be for all of humanity to transition to sustainable levels of consumption for it is unrealistic to expect new consumers not to aspire to be like the old ones Cogent in its analysis *The New Consumers* issues a timely warning of a major and developing environmental trend and suggests valuable strategies for ameliorating its effects

Existential Politics Jessica F. Green, 2025-10-07 A new way to tackle the real politics of climate change through asset revaluation It's no secret that the Paris Agreement and voluntary efforts to address climate change are failing Governments have spent three decades crafting international rules to manage the climate crisis yet have made little progress on decarbonization In *Existential Politics* Jessica Green explains why this is unsurprising governments have misdiagnosed the political problem of climate change focusing relentlessly on measuring reporting and trading emissions This technical approach of managing tons ignores the ways that climate change and climate policy will revalue assets creating winners and losers Policies such as net zero carbon pricing and offsets all cater to the losers owners of fossil assets Ultimately Green contends climate change is a political problem Climate politics should be understood as existential creating conflicts that arise when some actors face the prospect of the devaluation or elimination of their assets or competition from the creation of new ones Fossil asset owners such as oil and gas companies and electric utilities stand to lose trillions in the energy transition Thus they are fighting to slow decarbonization and preserve the value of their assets Green asset owners who will be the basis of the decarbonized economy are fewer in number and relatively weak politically Green proposes using international tax finance and trade institutions to create new green asset owners and constrain fossil asset owners reducing their clout Domestic investments in green assets facilitated by global trade rules can build the political power of green asset owners
