

Human Blood Cell Typing

What divided your parent?

Object

The objective of this activity is to understand how blood is categorized by the American Red Cross using international coding system previously developed and used by the ABO system for genetic disease and later the addition for antigens. Human red blood cells have a system for being categorized that will be helpful in the study of large cellular structures and helping us to categorize.

Object 1 – Red Blood Cells and Antigens

	Person with Blood Type A	Person with Blood Type B	Person with Blood Type AB	Person with Blood Type O
Cells with attached antigens				
Antibody produced				
Cells for the person's own blood are healthy				
Cells for the person's own blood are not healthy				

- Remembering that blood agglutination is characterized by clumping or sticking of antigens, use the symbols of the red blood cells.
 - Remembering to include 1, how many blood types are there? (the human population)
 - What blood is used in blood type A? (antigen) or B? (antigen)
 - What blood is used in blood type AB? (antigen) or B? (antigen)
 - What blood type is used in blood type O? (antigen) or B? (antigen)
- Use of red blood cells (A, B, AB, O) and antibodies (A, B, AB, O) in the blood.
