Human Computer Interaction Psychonomic Aspects:

Human-Computer Interaction Gerrit C. van der Veer, Gijsbertus Mulder, 2012-12-06 This book provides a broad overview of the contributions of experimental research in psychology and related disciplines to the domain of human computer interaction Four major topics are considered The first deals with the presentation of visual information and basic aspects of visual information processing Some relevant applications are also illustrated in the domains of texts and visual presentation of statistical information The second major topic is concerned with the representation of knowledge The interaction between man and machine is most effective if both components have an adequate representation of knowledge Several techniques of representation are shown and the compatibility between human representation and machine representation is discussed The development of expert systems will in many respects change the nature of the interaction between man and machine in artificial intelligence In the third part future developments the current state of expert systems as compared with human experts and the characteristics of productions systems which are so prominent in most expert systems are all discussed Finally some features of interaction with systems are reviewed including the ergonomic value of key boards and advanced input modes like handwritten text and speech Procedures for searching for information in large databases and for the use of natural language in the interaction between man and machine are increasingly important

Mental Models and Human-Computer Interaction Martin G. Tauber, D. Ackermann, 2013-10-22 Nowadays mental models are seen as crucial in systems design Research is driven by the assumption that a better insight into a user's cognitive processes when using a system will improve design methods and provide friendly and efficient interfaces The papers in this volume explore three fundamental issues understanding the complexity of the intended worksystem describing it by models and finally building the required powerful and usable system The papers are an edited selection of those presented at the 8th interdisciplinary workshop on Mental Models and HCI held in Austria in June 1989 They concentrate primarily on design issues their theoretical background and the application of the concept of Human Computer Interaction HCI Nevertheless there are also contributions on theoretical topics and methodological questions

Visualization in Human-Computer Interaction Peter Gorny, 1990 This volume presents a selection of the contributions to the Seventh Workshop on Informatics and Psychology The theme of the workshop was Visualization in Human Computer Interaction Visualization is nowadays recognized as an important aspect of user oriented human computer interfaces Both informatics and psychology are concerned with this topic In informatics the technology is being developed which makes visualization and interaction based on visual concepts feasible Another important trend in informatics is the development of prototypical solutions Visual programming visual languages graphical interfaces visual representations and many other keywords characterize current efforts in this field Psychologists are working on the question of how people represent knowledge visually and how they can take advantage of visual representations when solving tasks
