Whalley, 2016-07-22 *Mobile Telecommunications in a High Speed World* tells the story of 3G and higher speed mobile communication technologies. Over ten years have passed since the first third generation 3G licences were awarded following debates about the merits of auctions versus beauty contests; then nothing much happened. More licences were issued, a few roll outs commenced and everyone began to think it had all been a horribly expensive mistake. That may still turn out to be the case, but in the meantime there have been massive developments in terms of the number of licences and launches worldwide in the range of services that can be accessed in the range of devices that can be used to access them in operator strategies etc. Even the technology has improved considerably with 4G now under discussion. Much of this story has been chronicled largely on the Internet but the information is in tens of thousands of bits and pieces and a large part of it is either misleading or just plain wrong. Here Peter Curwen and Jason Whalley introduce the outcomes of research that has involved the compilation of a unique database which details every licence and launch worldwide involving 3G. The authors discuss the structure of the industry and the strategic behaviour of operators as well as the social consequences of the spread of 3G. They examine the role of new entry upon competition and present analysis of the main operators involved, the development of handsets and especially smartphones. A number of country case studies are included. This comprehensive and up to date volume includes a number of country studies and is written by two of the world's foremost researchers on this industry. *Mobile Telecommunications in a High Speed World* will serve the needs of students, academics and those involved or contemplating involvement with the telecoms industry. Why pay thousands of dollars to consultancies to separate the wheat from the chaff with respect to 3G when you can read this book.

Evolution of Telecommunication Services Emmanuel Bertin, Noel Crespi, Thomas Magedanz, 2013-10-14 In the telecom world, services have usually been conceived with a specific mindset. This mindset has defined the traditional characteristics of these services: services distinguished by their linkage with the access network, tight control over service use, e.g. authentication, billing, lack of deep personalization capabilities, mass services only, and reliance on standardization to achieve end-to-end interoperability between all the actors of the value chain, e.g. operators, platform manufacturers, device manufacturers. This book offers insights into this complex but exciting world of telecommunications, characterized by constant evolution, and approaches it from technology as well as business perspectives. The book is appropriately structured in three parts: a) an overview of the state of the art in fixed, mobile, NGN and standardization activities; b) an analysis of the competitive landscape between operators, device manufacturers and OTT providers, emphasizing why network operators are challenged on their home turf and c) opportunities for business modeling and innovative telecom service offers.
