Sedimentology and Stratigraphy Gary Nichols, 2013-04-30 This fully revised and updated edition introduces the reader to sedimentology and stratigraphic principles and provides tools for the interpretation of sediments and sedimentary rocks. The processes of formation, transport and deposition of sediment are considered and then applied to develop conceptual models for the full range of sedimentary environments from deserts to deep seas and reefs to rivers. Different approaches to using stratigraphic principles to date and correlate strata are also considered in order to provide a comprehensive introduction to all aspects of sedimentology and stratigraphy. The text and figures are designed to be accessible to anyone completely new to the subject and all of the illustrative material is provided in an accompanying CD ROM. High resolution versions of these images can also be downloaded from the companion website for this book at www.wiley.com/go/nicholssedimentology

Sustainable Energy and Environment Sandeep Narayan Kundu, Muhammad Nawaz, 2019-09-20 Here is a comprehensive introductory discussion of Earth energy and the environment in an integrated manner that will lead to an appreciation of our complex planet. The book looks at Earth from the perspective of a livable planet and elaborates on the surface and subsurface processes and the various energy cycles where energy is transformed and stored in the planet's various spheres. The chapters discuss the interactions between the different parts of Earth: how energy is exchanged between the atmosphere, hydrosphere, biosphere and geosphere, and how they impact the environment in which we live.

Deep Time Noah Heringman, 2023-01-03 Deep Time: A Literary History challenges the exclusive association between deep time and the modern science of geology by focusing on late Enlightenment writings that used narrative form to integrate new empirical data and methods with Western and non-Western traditions of chronology, earth history and human origins. Choosing the mid-eighteenth century as a starting point, Heringman aims to demonstrate how deep time became associated with Earth history in the first place, expanding its conceptual domain to include colonial natural history, oral tradition and scientific romance. All

frontiers of the expanded time horizons associated with modernity. It considers the conceptual opening of a modern geological timescale in literary scientific and travel writing in the late Enlightenment Romantic period with chapters on the explorer naturalist team of John Reinhold and George Forster who sailed with Captain Cook 1772-1775, Buffon's protogeochronological Epochs of Nature 1778, Herder, Blake, and prehistory through oral tradition, and Charles Darwin's dialogue with anthropology and archaeology especially in *The Descent of Man* 1871. When eighteenth and nineteenth century explorers, naturalists, poets, and philosophers wrote about the abyss of time, they referred to a large and diverse set of new ideas that unsettled the established time scale ideas about cultural evolution inspired by Pacific peoples recently encountered by James Cook and other voyagers, a new sense of the depth and diversity of the Earth's strata produced by increased attention to their structure and deposition, the study of oral traditions by poets and scholars associated with the ballad revival, and the study of non-Western scriptures such as the Mahabharata which calculated time on an entirely different scale. The latter two pursuits dovetailed with the investigations of voyagers from Johann Reinhold Forster to Charles Darwin who sought to measure the age of non-European civilizations by way of the geological age of their environments. Ultimately, Heringman argues that the concept of deep time now associated primarily with modern geology was a composite of human and natural history to begin with.

Christian Worldview and the Academic Disciplines Deane E. D. Downey, Stanley E. Porter, 2009-04-15. This book, an edited compilation of twenty-nine essays, focuses on the differences that a Christian worldview makes for the disciplines or subject areas normally taught in liberal arts colleges and universities. Three initial chapters of introductory material are followed by twenty-six essays, each dealing with the essential elements or issues in the academic discipline involved. These individual essays on each discipline are a unique element of this book. These essays also treat some of the specific differences in perspective or procedure that a biblically informed Christian perspective brings to each discipline. *Christian Worldview and the Academic Disciplines* is intended principally as an introductory textbook in Christian worldview courses for Christian college or university students. This volume will also be of interest to Christian students in secular post-secondary institutions who may be encountering challenges to their faith, both implicit and explicit, from peers or professors who assume that holding a strong Christian faith and pursuing a rigorous college or university education are essentially incompatible. This book should also be helpful for college and university professors who embrace the Christian faith but whose post-secondary academic background, because of its secular orientation, has left them inadequately prepared to intelligently apply the implications of their faith to their particular academic specialty. Such specialists, be they professors or upper-level graduate students, will find the extensive bibliographies of recent scholarship at the end of the individual chapters particularly helpful. Downey and Porter present a unique contribution to the perennial question of how faith interacts with the academic disciplines. Numerous factors contribute to this book's significance: the common conviction that one's Christian beliefs ought to shape the contents of one's teaching, the variety of perspectives and

opinions and the wide range of academic disciplines under discussion The essays originating among the excellent faculty of Trinity Western University will deservedly be much used in undergraduate colleges and universities Hans Borsma J I Packer Professor of Theology Regent College Few faculty Christian or otherwise understand what their colleagues in other departments are doing or why This collection of essays is not only an excellent introduction to the whole scope of academic enterprises but to the unique and important relationship between each discipline and the Christian faith An important book not only for the entire range of faculty but for students yearning to understand both their Christian faith and what is being taught in the classroom James W Sirf author of the Universe Next Door and with co author carl Peraino Deepest Differences A Christian Atheist Dialogue Christian Worldview and the Academic Disciplines is a book long overdue It will serve as an outstanding textbook for interdisciplinary courses But this book is more than that Christian Worldview and the Academic Disciplines is a book that everyone concerned with Christian thought especially in the context of the Academy will want to read I highly recommend it Craig A Evans Payment Distinguished Professor of New Testament Acadia Divinity College Nova Scotia
