General Intelligence and Test of Reasoning Vikas Publishing House, Test Prep for General Intelligence and Test of Reasoning *Artificial General Intelligence* Jürgen Schmidhuber, Kristinn R. Thorisson, Moshe Looks, 2011-07-19 This book constitutes the refereed proceedings of the 4th International Conference on Artificial General Intelligence AGI 2011 held in Mountain View CA USA in August 2011 The 28 revised full papers and 26 short papers were carefully reviewed and selected from 103 submissions The papers are written by leading academic and industry researchers involved in scientific and engineering work and focus on the creation of AI systems possessing general intelligence at the human level and beyond

The Scientific Study of General Intelligence Helmuth Nyborg, 2003-07-11 This book celebrates two triumphs in modern psychology the successful development and application of a solid measure of general intelligence and the personal courage and skills of the man who made this possible Arthur R Jensen from Berkeley University The volume traces the history of intelligence from the early 19th century approaches to the most recent analyses of the hierarchical structure of cognitive abilities and documents the transition from a hopelessly confused concept of intelligence to the development of an objective measure of psychometric g The contributions illustrate the impressive power g has with respect to predicting educational achievement getting an attractive job or social stratification The book is divided into six parts as follows Part I presents the most recent higher stream analysis of cognitive abilities Part II deals with biological aspects of g such as research on brain imaging glucose uptake working memory reaction time inspection time and other biological correlates and concludes with the latest findings in g related molecular genetics Part III addresses demographic aspects of g such as geographic race and sex differences and introduces differential psychological aspects as well Part IV concentrates on the g nexus and relates such highly diverse topics as sociology genius retardation training education jobs and crime to g Part V contains chapters critical of research on g and its genetic relationship and also presents a rejoinder Part VI looks at one of the greatest contemporary psychologists Professor Emeritus Arthur R Jensen as teacher and mentor **Natural General Intelligence** Christopher Summerfield, 2023 Since the time of Turing computer scientists have dreamed of building artificial general intelligence AGI a system that can think learn and act as humans do Over recent years the remarkable pace of progress in machine learning research has reawakened discussions about AGI But what would a generally intelligent agent be able to do What algorithms architectures or cognitive functions would it need To answer these questions we turn to the study of natural intelligence Humans and many other animals have evolved precisely the sorts of generality of function that AI researchers see as the defining hallmark of intelligence The fields of cognitive science and neuroscience have provided us with a language for describing the ingredients of natural intelligence in terms of computational mechanisms and cognitive functions and studied their implementation in neural circuits Natural General Intelligence describes the algorithms and architectures that are driving progress in AI research in this language by comparing current AI systems and biological brains side by side In doing

so it addresses deep conceptual issues concerning how perceptual memory and control systems work and discusses the language in which we think and the structure of our knowledge. It also grapples with longstanding controversies about the nature of intelligence and whether AI researchers should look to biology for inspiration. Ultimately Summerfield aims to provide a bridge between the theories of those who study biological brains and the practice of those who are seeking to build artificial brains.

Artificial General Intelligence Ben Goertzel, Matthew Iklé, Alexey Potapov, 2022-01-06 This book constitutes the refereed proceedings of the 14th International Conference on Artificial General Intelligence AGI 2021 held as a hybrid event in San Francisco CA USA in October 2021. The 36 full papers presented in this book were carefully reviewed and selected from 50 submissions. The papers cover topics from foundations of AGI to AGI approaches and AGI ethics to the roles of systems biology, goal generation and learning systems and so much more.

Theoretical Foundations of Artificial General Intelligence Pei Wang, Ben Goertzel, 2012-08-31 This book is a collection of writings by active researchers in the field of Artificial General Intelligence on topics of central importance in the field. Each chapter focuses on one theoretical problem, proposes a novel solution, and is written in sufficiently non-technical language to be understandable by advanced undergraduates or scientists in allied fields. This book is the very first collection in the field of Artificial General Intelligence AGI focusing on theoretical, conceptual, and philosophical issues in the creation of thinking machines. All the authors are researchers actively developing AGI projects, thus distinguishing the book from much of the theoretical, cognitive science, and AI literature which is generally quite divorced from practical AGI system building issues. And the discussions are presented in a way that makes the problems and proposed solutions understandable to a wide readership of non-specialists, providing a distinction from the journal and conference proceedings literature. The book will benefit AGI researchers and students by giving them a solid orientation in the conceptual foundations of the field, which is not currently available anywhere, and it would benefit researchers in allied fields by giving them a high-level view of the current state of thinking in the AGI field. Furthermore, by addressing key topics in the field in a coherent way, the collection as a whole may play an important role in guiding future research in both theoretical and practical AGI and in linking AGI research with work in allied disciplines.
