Student Exploration: Genetic Engineering

Directions: Follow the instructions to go through the simulation. Respond to the questions and prompts in the orange boxes.

Vocabulary: callus, exon, genetic engineering, genetically modified organism, genome, green fluorescent protein (GFP), herbicide, insecticide, intron, promoter, transcription, transformation

Prior Knowledge Questions (Do these BEFORE using the Gizmo.)

1. What are some things that can damage a farmer's crops? _____

Bacteria and different insects. As well as birds and other small mammals.

2. What can farmers do to protect their crops? _____

Use sprays and different locations such as indoor farming as its becoming very popular although it is a bit more expensive

Gizmo Warm-up

Many farmers use chemical **herbicides** to kill weeds and **insecticides** to kill insects. Using **genetic engineering**, scientists have developed ways to resist harmful crop pests. In the *Genetic Engineering* Gizmo, you will use genetic engineering techniques to create **genetically modified** corn.

Check that Task 1 is selected. The Gizmo shows petri dishes that contain different strains of bacteria (white dots) and caterpillars (Lepidoptera sp. larvae). In the first challenge, your goal is to find bacteria that produce toxins that kill the caterpillars. Click Play (▶).

1. What do you observe? _____

While most of the caterpillars were able to live, several of them did not.

2. Which strains of bacteria were able to kill Lepidoptera sp. larvae? _____

strains 4,5,8 and 10

Were some more effective than others? Explain. _____

Other caterpillars perished, indicating that some were far more affected than others.

Some bacteria are able to produce a toxin that kills Lepidoptera sp. larvae. Find out which gene is responsible for this toxin in the next step.

Lentivirus Gene Engineering Protocols Maurizio Federico, 2008-02-03 Cell gene engineering is emerging as a field with outstanding impact not only in medicine biology but also and perhaps most importantly in agriculture and in all those food sciences involved in the fight against world hunger Lentivirus vector based technologies represent the last frontier in the development of powerful and reliable methods for both in vitro and in vivo gene transfer in eukaryotic animal cells Although the design of lentivirus vectors is closely reminiscent of those already successfully applied to the construction of oncoretroviral vectors some unique features e g the efficiency in transducing both postmitotic and stem cells render the use of lentivirus vectors invaluable It has been a great pleasure to edit Lentivirus Gene Engineering Protocols owing in part to the high level of enthusiasm that the authors demonstrated in contributing to this book The fact that so many outstanding scientists engaged in lentivirus vector research have provided articles renders it something more than a technical handbook In addition to detailed descriptions of the most innovative methodologies the reader may find very informative or views concerning both theoretical and practical aspects of the origin and the development of diverse lentivirus vector types This in my opinion represents a unique added value of this volume which should help our work resist the passage of time to which books such as this are particularly sensitive

Biotechnology and Genetic Engineering Willy Gibson & Clem Koch, 2019-11-07 Biotechnology and Genetic Engineering is an important reference tool for students teachers physicians science and technical writers and anyone looking for a concise source of current information on this fast breaking field Biotechnology is the study of science which have discussed over many years but on the other hand Genetic Engineering is the premature and young branch of science which has many milestones to achieve Biotechnology deals with a set of biological techniques developed through basic research and now applied to research and product development It is the means or way of manipulating life forms organisms to provide desirable products for man's use For example beekeeping and cattle breeding could be considered to be biotechnology related endeavors Basically Genetic Engineering is the modern modification and subspecialty of the branch of science called biotechnology It deals and concerned with the specific and targeted modifications of the genetic material of bacteria and plants to stimulate them synthesize or biosynthesize desired products Genetic Engineering is helping a lot to attain the results which are so much beneficial and helpful to the mankind either it implies the genetic engineering of plants or animals or to microbes to help and improve the quality and quantity of food sometimes Production associated with food items as well as drugs continues to be the principle exercise carried out by means of genetic engineering This book covers all of the fundamental principles of the modern topics and has been presented in a very simple manner for self study and provides comprehensive coverage of the standard topics

Basic Genetics Ahmed Abouelmagd, Hussein M. Ageely, 2013-04 Basic Genetics is a concise introductory textbook that focuses not only on understanding and explaining the main points of genetics but also upon covering the required essential traditional subjects in

the field The main goal of this textbook is to help first year students who are taking their first course in human genetics to understand the different topics within genetics It is of particular interest for those who are preparing themselves to study medicine or other medical sciences This textbook presents only the essential required information Some of the different subjects included in the eight chapters are cell cycle and cellular division Mendelian principles of heredity the molecular basis of genetic material gene expression and gene expression control genetic variations and genetic engineering as well as human genetics In addition Basic Genetics contains multiple choice questions covering each topic and their answers These questions are absolutely essential for students self assessment These different topics of basic genetics have also been illustrated by simple diagrams in full color *Curing Cancer* Michael Waldholz,1999-03-24 Reports on current research on the causes of cancer including dramatic recent genetic breakthroughs that offer new hope for a cure *Plant Nutrition — from Genetic Engineering to Field Practice* J. Barrow,2012-12-06 Plant Nutrition From Genetic Engineering to Field Practice the 12th International Colloquium on Plant Nutrition is the latest in a series which began in 1954 Early meetings were mainly concerned with the practical problems of soil fertility with soil assessment fertilizer requirements and methods of analysis As the colloquia have progressed the emphasis has slowly changed The practical problems are still important but there is increasing emphasis on plant physiology plant biochemistry membrane biochemistry and even on the chemistry of genes which control the proteins which transfer nutrient ions to the inside of cells The meetings therefore provide a valuable opportunity for each half of the science of plant nutrition to interact with and learn from the other half This volume begins with five papers which review current knowledge in important fields the rhizosphere molecular biology electron microscopy location and function of elements in vivo and modelling nutrient responses in the field These themes are continued in groups of shorter papers which follow In addition there are sections on nutrient dynamics and partitioning diagnostic techniques plant survival strategies mycorrhizas and on nutrients such as P N S K Ca Mg and micronutrients A large section is devoted specifically to boron reflecting the considerable current interest in this element In total there are 177 refereed papers providing both a broad overview and a detailed picture of the latest developments in pure and applied plant nutrition
