- (1) is different in the way that it gives less weight to changing
- (2) effects are both different in magnitude and the weights fit
- (3) effects are both different in magnitude and the weights fit
- (4) refers to the degree of agreement of responses
- (5) refers to the degree of agreement of responses
- (6) is a test that is more dependent on the degree of agreement of responses
- (7) is a test that is more dependent on the degree of agreement of responses
- (8) is a test that is more dependent on the degree of agreement of responses

Fig. 1. Schematic diagram of the experimental setup. The subject is seated in a chair and views the screen through a mirror. The screen displays the target and the starting position of the hand. The hand is moved from the starting position to the target position. The distance between the starting position and the target is the reach distance. The distance between the target and the starting position is the reach distance. The distance between the target and the starting position is the reach distance.

**NOTE** The rate of return is calculated by comparing the difference in the value of the stock at the end of the period with the amount of the investment. The rate of return is calculated by dividing the difference in the value of the stock by the amount of the investment. The rate of return is calculated by dividing the difference in the value of the stock by the amount of the investment.
