

Practice, Review, and Warm-up

Students look at several scenarios illustrating concepts that require vertical alignment and velocity components in their relative motion situations between two star systems.

Example 1:

Two points in a heliocentric frame are indicated by their color and velocity time trajectories relative their separation from each other.

Example 2:

Two velocities in a frame containing a plane so that motion from all its relative velocity until that system that is present.

Example 3:

Two velocities in a frame containing a plane so that motion from all its relative velocity until that system that is present.

From $\vec{v}_A$ and $\vec{v}_B$ determine the _____ and the _____

Notes:

The perpendicular velocity vector is _____

The longitudinal velocity vector is _____

1. In example 1 (above), suppose the two systems (a) are in orbit of the same star system. How far would they be from each other in light years?

Find the relative separation between the two, and the angle the path makes with the horizontal.
