Papazoglou, S. Spaccapietra, Zahir Tari, 2000 This book focuses on recent developments in representational and processing aspects of complex data intensive applications Until recently information systems have been designed around different business functions such as accounts payable and inventory control Object oriented modeling in contrast structures systems around the data the objects that make up the various business functions Because information about a particular function is limited to one place to the object the system is shielded from the effects of change Object oriented modeling also promotes better understanding of requirements clear designs and more easily maintainable systems. This book focuses on recent developments in representational and processing aspects of complex data intensive applications. The chapters cover hot topics such as application behavior and consistency reverse
