Embryonic Stem Cell Research Paper:

Stem Cell Research Great Britain. Parliament. House of Lords. Select Committee on Stem Cell Research, Great Britain. Parliament. House of Lords, 2002 The Committee was appointed in March 2001 to examine the issues arising from the Human Fertilisation and Embryology Research Purposes Regulations 2001 These regulations extended the legal grounds for research on human embryos to include the increase of knowledge about the development of embryos or serious disease or to enable such knowledge to help in the development of treatments for serious diseases The Committee's report analyses the potential of stem cell research to generate new therapies and assesses the relative scientific advantages and disadvantages of research on embryonic and adult stem cells It considers the ethical concerns about the use of early human embryos for research purposes and the implications of developments in cell nuclear replacement and reproductive cloning The report discusses the current regulatory regime and the scope for future legislation including the issue of informed consent and the creation of stem cell banks Overall the Committee finds that there is a strong scientific and medical case for continued research on human embryonic stem cells in order to realise the full therapeutic potential of stem cell research Adult stem cell research holds the promise of future therapies which might make further research on embryonic cells unnecessary although this is unlikely in the foreseeable future In the meantime to ensure maximum medical benefit it is necessary to keep both routes to therapy open since neither alone is likely to meet all therapeutic needs The role of the Human Fertilisation and Embryology Authority is crucial to the effective regulation of research and maintenance of public confidence The Ethics of Embryonic Stem Cell Research Katrien Devolder, 2015-01-22 Embryonic stem cell research holds unique promise for developing therapies for currently incurable diseases and conditions and for important biomedical research However the process through which embryonic stem cells are obtained involves the destruction of early human embryos Katrien Devolder focuses on the tension between the popular view that an embryo should never be deliberately harmed or destroyed and the view that embryonic stem cell research because of its enormous promise must go forward She provides an in depth ethical analysis of the major philosophical and political attempts to resolve this tension One such attempt involves the development of a middle ground position which accepts only types or aspects of embryonic stem cell research deemed compatible with the view that the embryo has a significant moral status An example is the position that it can be permissible to derive stem cells from embryos left over from in vitro fertilisation but not from embryos created for research Others have advocated a technical solution Several techniques have been proposed for deriving embryonic stem cells or their functional equivalents without harming embryos An example is the induced pluripotent stem cell technique Through highlighting inconsistencies in the arguments for these positions Devolder argues that the central tension in the embryonic stem cell debate remains unresolved This conclusion has important implications for the stem cell debate as well as for policies inspired by this debate Human Cloning and Embryonic Stem Cell Research After Seoul United States.
