**Empowering Professional Teaching in Engineering** John Heywood, 2022-05-31 Each one of us has views about education: how discipline should function, how individuals learn, how they should be motivated, what intelligence is, and the structures, content and subjects of the curriculum. Perhaps the most important beliefs that beginning teachers bring with them are their notions about what constitutes good teaching. The scholarship of teaching requires that beginning teachers should examine, evaluate these views in the light of knowledge currently available about the curriculum and instruction and decide their future actions on the basis of that analysis. Such evaluations are best undertaken when classrooms are treated as laboratories of inquiry, research where teachers establish what works best for them. Two instructor-centred and two learner-centred philosophies of knowledge, curriculum and instruction are used to discern the fundamental basic questions that engineering educators should answer in respect of their own beliefs and practice. They point to a series of classroom activities that will enable them to challenge their own beliefs and at the same time affirm, develop or change their philosophies of knowledge, curriculum and instruction.

**Statistical Yearbook of Jamaica**, 1977 *Curriculum Practice* Martyn Hammersley, Andy Hargreaves, 2012-05-04 When first published, this book was one of the first collections of empirical research in the area of the knowledge transmitted in schools and the responses of students to it. It includes studies of the histories of particular school subjects and of how the knowledge they embody is presented in the classroom. Attention is also given to the effects of gender stereotypes among teachers and pupils, both on pupils' selection of courses to study and on their reactions to particular subjects in the classroom. The other major topic in this collection is the way external examinations

shape the nature of the school curriculum and how it is taught There are studies of how pupils and teachers adapt to the exam system and of how that system and its role in the accountability of schools have changed in recent years The articles collected here throw into relief important aspects of what is taught in schools and they do this on the basis of a solid foundation of empirical research
